## Table of Contents

Appendix A: Acronyms.....	5
Appendix B: Mitigation Action Progress Report Form.....	9
Appendix C: 2018 Mitigation Actions and 2023 Update .....	11
Appendix D: County Data Sheets .....	39
Appendix E: Human Caused and Technological Hazards.....	85
Hazard: Aging Infrastructure .....	87
Hazard: Cyber Event.....	90
Hazard: Known and Emerging Contaminates .....	96
Hazard: Long-Term Utility Outage .....	102
Hazard: Mass Casualty Incident .....	107
Hazard: Radiological .....	111
Hazard: Transport Accident .....	114
Hazard: Terrorism/Targeted Violence .....	117
Appendix F: Data for Equitable Outcomes .....	123
Economic Stability .....	125
Community & Social Context .....	133
Neighborhood & Physical Environment .....	148
Education: K-12 Data.....	151
Education: Higher Education.....	167
Education: Language Spoken at Home.....	169
Neighborhood and Physical Environment: Violence in SchoolK-12.....	171
Appendix G: SHMP Maintenance and Implementation Process .....	176
Appendix H: National Risk Index Risk Comparison Report .....	182
Risk Index.....	183
Hazard Type Risk Index.....	184
Appendix I: Previous Development (since 2018 Plan) .....	210
Appendix J: Dam Location Maps .....	222
Appendix K: Watershed Area Base Maps .....	227

## Appendix A: Acronyms

Approvable Pending Adoption	APA
Base Flood Elevation	BFE
Bureau of Infectious Disease Control	BIDC
Centers for Disease Control and Prevention	CDC
Code of Federal Regulations	CFR
Community Development Block Grant	CDBG
Community Rating System	CRS
Comprehensive Preparedness Guide	CPG
Continuity of Operations Plan	COOP
Coronal Mass Ejection	CME
Coronavirus Disease 2019 (SARS-CoV-2) , Covid-19	COVID-19 p46
Critical Infrastructure and Key Resources	CIKR
Department of Administrative Services	DAS
Department of Resources and Economic Development	DRED
Department of Safety	DOS
Division of Forest and Lands	DFL
Division of Public Health Services	DPHS
Drinking Water and Groundwater Trust Fund	DWGTF
Drought Assistance Program	DAP
Emergency Declarations	EM
Emergency Preparedness, Response, and Recovery	EPRR
Emergency Support Function	ESF
Emergency Warning System	EWS
Emergency management Planning Grant	EMPG
Emergency Preparedness and Response	EPR
Escherichia coli	E. Coli
Federal Emergency Management Agency	FEMA
Federal Firefighter Property Program	FFP
Fire Management Assistance Grants	FMAG
Hazard Mitigation Grant Program	HMGP
Pre-Disaster Mitigation	PDM
Flood Mitigation Assistance	FMA
H1N1; Correct name: novel influenza A (H1N1)	(H1N1)pdm09
High Hazard Potential Dam	HHPD
Building Resilient Infrastructure & Communities	BRIC
Fire Management Declarations	FM
Flood Insurance Rate Maps	FIRMs

Flood Insurance Study	FIS
Flood Mitigation Assistance	FMA
Food and Drug Administration	FDA
Food Protection Section	FPS
greenhouse gases	GHG
Hazard Identification and Risk Assessment	HIRA
Hazard Mitigation Assistance	HMA
Hazard Mitigation Grant Program	HMGP
High Hazard Potential Dam	HHPD
Housing and Urban Development	HUD
Human Immunodeficiency Virus	HIV
Hurricane Evacuation Studies	HES
Influenza like Illness	ILI
Integrated Preparedness Plan	IPP
Interagency Hazard Mitigation Team	IHMT
International Building Code	IBC
International Residential Code	IRC
Light Detection and Ranging	LiDAR
Local Emergency Operations Plan	LEOP
Maximum Envelopes of Water	MEOWs
Mean Lower Low Water	MLLW
Megawatt	MW
Middle Eastern Respiratory Syndrome	MERS
Modified Mercalli Intensity	MMI
Moment Magnitude	$M_M$
Moment Magnitude Scale	$M_w$
Monkeypox - Orthopoxvirus	MPOX
Mount Washington Avalanche Center	MWAC
National Association for Stock Car Auto Racing	NASCAR
National Disaster Recovery Framework	NDRF
National Drought Mitigation Center	NDMC
National Flood Insurance Program	NFIP
National Oceanic and Atmospheric Administration	NOAA
National Wildfire Coordinating Group	NWCG
New Hampshire Coastal Risk and Hazards Commission	NHCRHC
New Hampshire Department of Agriculture, Markets, and Food	DAMF
New Hampshire Department of Environmental Services	NHDES
New Hampshire Department of Natural and Cultural Resources	NH DNCR

New Hampshire Drought Management Team	NHDMT
New Hampshire Fire Incident Reporting System	NHFIRS
New Hampshire Fire Marshal's Office	NHFMO
New Hampshire Geological Survey	NHGS
New Hampshire Homeland Security and Emergency Management	NH HSEM
New Hampshire Motor Speedway	NHMS
New Hampshire Office of Planning and Development	NH OPD
New Hampshire Department of Transportation	NH DOT
Non-Governmental Organizations	NGOs
North American Public Avalanche Danger Scale	NAPADS
Northeast Snowfall Impact Scale	NESIS
National Weather Service	NWS
Pre-Disaster Mitigation	PDM
Presidential Declarations	DR
Presidential Policy Directive 8	PPD-8
pressurized water reactor	PWR
Program Administration by State	PAS
Public Health Laboratories	PHL
Recovery Support Functions	RSFs
Regional Planning Commissions	RPCs
Regional Snowfall Index	RSI
Relative sea-level rise	RSLR
Repetitive Flood Claim	RFC
Revised Statutes Annotated	RSA
Mapping, Assessment and Planning	Risk MAP
Science and Technical Advisory Panel	STAP
Sea, Lake, and Overland Surge from Hurricanes	SLOSH
Severe Acute Respiratory Syndrome (SARS-CoV)	SARS
Severe Repetitive Loss	SRL
Social determinants of health	SDOH
State Hazard Mitigation Officer	SHMO
State Hazard Mitigation Plan	SHMP
State Hazard Mitigation Planning Committee	SHMPC
State of New Hampshire Emergency Operations Plan	SEOP
Subject Matter Expert	SME
Technical Assistance	TA
Threat and Hazard Identification and Risk Assessment Stakeholder Preparedness Review	THIRA/SPR

Tuberculosis	TB
U.S. Drought Monitor Map	USDM
U.S. Outpatient Influenza-like Illness Surveillance Network	ILINet
United States Geological Survey	USGS
Water Assistance for Natural Disasters Program	WAND
World Health Organization	WHO

## Appendix B: Mitigation Action Progress Report Form

	<b>New Hampshire Department of Safety</b> <b>Division of Homeland Security and Emergency Management</b> <b>State Hazard Mitigation Plan</b>		
	<b>Mitigation Action Progress Report Form</b>		
<b>Project Information</b>			
<b>Action/Project Title</b>			
<b>Progress Report Period</b>		<b>From:</b>	<b>To:</b>
<b>Project Status</b>	<input type="checkbox"/> Project Completed		<input type="checkbox"/> Project Cancelled
	<input type="checkbox"/> Project on Schedule		<b>Anticipated Completion Date:</b>
	<input type="checkbox"/> Project Delayed		
	<b>Explain:</b>		
<b>1. What was accomplished for this project during this reporting period?</b>			
<b>2. What obstacles, problems, or delays did the project encounter?</b>			
<b>3. If uncompleted, is this project still relevant? Should the project be changed or revised?</b>

## Appendix C: 2018 Mitigation Actions and 2023 Update

This page intentionally left blank.

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
1	35	Maintain the statewide Reverse 911 system for the dissemination of hazardous situations and emergency events.	Ongoing	NH E911	All Hazards	In-Kind	Item removed - Stakeholders deemed item a Preparedness & Response item, not Mitigation
2	35	Sustain the Emergency Alert System as necessary.	Ongoing	NH HSEM	All Hazards	In-Kind	Item removed - Stakeholders deemed item a Preparedness & Response item, not Mitigation. Also deemed a State Capability
3	34	Continue implementation and expansion of the NH Alerts program for both the public application and State employee notification.	New	NH HSEM	All Hazards	HSGP	Item removed - Stakeholders deemed a State Capability
4	34	Provide NFIP training and outreach to communities that encourages sound floodplain management practices and promotes flood hazard mitigation activities and available funding mechanisms.	New	NH OSI	Coastal Flooding / Inland Flooding / Tropical and Post-Tropical Cyclones	In-Kind, NH Coastal Resilience Grants	Item continued - Stakeholders deemed still an active item, as some communities are drifting toward ineligibility - <b>New Item #4</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
5	34	Fund cost –effective Mitigation Projects through available federal grants and local cost share (HMGP, PDM, FMA).	Ongoing	NH HSEM	Natural Hazards	FMA, PDM, and HMGP	Item removed - Stakeholders deemed a State Capability, also partially covered by 2018 item #22
6	34	The Dam Bureau will continue to execute dam safety inspections and enforcement programs as needed.	Ongoing	NHDES	Inland Flooding / Dam Failure	In-Kind	Item continued - Stakeholders deemed still an active item - <b>New Item #24</b>
7	34	Maintain NHDES funding and coordinate with other funding sources to replace aging infrastructure. Promote asset management activities at drinking water and wastewater systems.	New	NHDES	Aging Infrastructure / Emerging Contaminates	In-Kind, State Bridge Aid Program	Item continued - Stakeholders deemed still an active item. Updated funding sources, since 2018 Plan this will become a permanent program - <b>New Item #7</b>
8	33	NH DOT to review and update, as applicable, vulnerability assessments on the 24 critical bridges throughout the State.	Ongoing	NH DOT	Aging Infrastructure	In-Kind	Item removed - Stakeholders deemed item no longer necessary due to new 2023 FEMA guidance removing Human-Caused Hazards.

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
9	33	Sustain NHDOT and UNH - TTC - T2 Program in the development of road design construction, storm water and road drainage standards, including culvert and bridge sizing.	Ongoing	NH DOT, UNH	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #12</b>
10	33	Work toward implementing the New Hampshire Coastal Risk and Hazard Commission recommendations related to hazard mitigation.	New	NHDES - Coastal Program, NOAA	Coastal Flooding /Inland Flooding	NH Coastal Resilience Grants, FMA, PDM, HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #21</b>
11	33	Expand upon current descriptors used for State asset inventory to include data such as location, building material, and hazard vulnerabilities.	New	Multi-Agency	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #15</b>
12	33	Identify and address sources of emerging contaminants. Where possible, provide alternate water.	New	NHDES	Emerging Contaminates	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #3</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
13	33	Organize and train Road Agents, EMDs and “Skywarn” etc. volunteers in affected areas in ice monitoring activities that will enhance the NH-CRREL database.	Completed and Ongoing	NH Silver Jackets / CRREL	Inland Flooding / Severe Winter Weather	SJ/USACE	Item continued - Stakeholders deemed still an active item. - <b>New Item #27</b>
14	33	Maintain the tips line for the reporting of homeland security concerns	Ongoing	NH IAC	Terrorism/Violence / MCI / Cyber Event	In-Kind, EMPG	Item removed - Stakeholders deemed item no longer necessary due to new 2023 FEMA guidance removing Human-Caused Hazards.
15	32	Sustain the New Hampshire Department of Environmental Services and Water Division in the implementation of the State's Drought Management Plan.	Ongoing	NHDES	Drought	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #16</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
16	32	Using materials supplied by National Fire Protection Association (NFPA) and others, the State will utilize and develop public information materials for distribution to appropriate State agencies, regional planning committees and local planning committees. Additionally, the NHFMO will review and develop (as necessary) Public Service Announcements to alert interested parties to the existence of fire, life safety, and hazardous materials risks.	Ongoing	NHFMO	Conflagration, Wildfire, Hazardous Materials	In-Kind	Item continued - Stakeholders deemed still an active item. Training program still required development - <b>New Item #40</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
17	32	Utilize collaborative partnerships, including the NH Coastal Adaptation Workgroup and the Upper Valley Adaptation Workgroup, to conduct outreach, technical assistance, and assessments on current and future flood hazard mitigation.	Ongoing	NHDES	Coastal Flooding / Inland Flooding	In-Kind, NH Coastal Resilience Grants	Item continued - Stakeholders deemed still an active item. - <b>New Item #1</b>
18	32	Incorporate 500-year flood plain threshold for new construction of drinking water and wastewater facilities in accordance with NEIWPC's TR-16 Guides for the Design of Wastewater Treatment Works and other similar documents (Revised 2011 Edition).	Ongoing	NHDES	Coastal Flooding / Inland Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #25</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
19	32	Encourage communities to adopt floodplain management regulations that exceed the minimum NFIP requirements, incorporating higher standards (e.g. freeboard, setback and compensatory storage requirements) that will improve local flood resilience.	Ongoing	NH OSI	Coastal Flooding / Inland Flooding	In-Kind, SJ/USACE	Item continued - Stakeholders deemed still an active item. - <b>New Item #19</b>
20	32	Incorporate projected sea-level rise, storm surge, and precipitation as well as associated changes in flood levels, currents, groundwater tables, stormwater runoff, and other related impacts into capital improvement projects, permitting, and other state actions.	Ongoing	Multi-Agency	Coastal Flooding / Inland Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #42</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
21	32	Update storm surge, sea-level rise, precipitation, and other relevant projections recommended in the Coastal Risk and Hazards Commission 2014 report “Sea-Level Rise, Storm Surges, and Extreme Precipitation in Coastal New Hampshire: Analysis of Past and Projected Trends” at least every 5 years, pursuant to Chaptered Law 121.	Ongoing	NHDES - Coastal Program, NOAA	Coastal Flooding / Inland Flooding	In-Kind	Item removed - Completed
22	32	Encourage and assist communities with the mitigation of repetitive loss properties acquisition & demolition, relocation or elevation (funding through HMGP, PDM, and FMA).	Ongoing	NH HSEM	Coastal Flooding / Inland Flooding	FMA, PDM, and HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #37</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
23	32	The Department of Natural and Cultural Resources will continue to assist in the development of the Community Wildfire Protection Plans (CWPP) and other plans and authorities to identify cost effective wildland fire hazard mitigation measures in accordance with the State's Forest Fire Protection Plan.	Ongoing	NH DNCR, NH HSEM	Wildfire	In-Kind, PDM, and HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #41</b>
24	32	Explore potential multi-agency uses of LIDAR data to support mitigation activities, such as holistic watershed flood monitoring.	New	NHDES - NHGS	Coastal Flooding / Inland Flooding / Tropical and Post-Tropical Cyclones	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #8</b>
25	32	Continue to sustain the stream gauge program and identify funding resources to strategic installation of additional stream gauges.	New	NHDES	Inland Flooding	In-Kind, USGS	Item continued - Stakeholders deemed still an active item. - <b>New Item #10</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
26	32	NHDES to assist partners in maintaining existing tidal gauge networks at Fort Point and Hampton and improve historical record keeping, forecasting, and outreach related to the tide gauge data.	New	NHDES	Coastal Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #14</b>
27	32	The SHMO will provide State agencies, local communities, Regional Planning Commissions, private non-profit, and private entities with applicable hazard mitigation outreach regarding the State's initiatives and available resources.	Ongoing	NH HSEM	Natural Hazards	FMA, PDM, and HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #5</b>
28	32	Provide standardized guidance on temperatures, sea-level rise, and precipitation changes, to local communities for incorporation into planning efforts.	New	NHDES	Natural Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #17</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
29	32	Provide education and outreach for mitigation strategies in reference to pre-event debris management.	New	NHDES	Natural Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #23</b>
30	31	The State will closely support local communities, with assistance from contractors and regional planning commissions, in the creation of single-jurisdiction and multi-jurisdiction hazard mitigation plans.	Ongoing	NH HSEM	Natural Hazards	PDM, HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #22</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
31	31	Encourage NFIP-participating communities that conduct floodplain management activities exceeding the minimum NFIP requirements to consider joining the Community Rating System (CRS), an NFIP incentive program that provides discounts to flood insurance premiums for some residents and businesses as a reward for the community's activities.	New	NH OSI	Inland and Coastal Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #32</b>
32	31	Evaluate the impacts of saltwater intrusion and changing groundwater table elevations as a result of sea-level rise and implications for water, waste, and asset/infrastructure management.	Ongoing	NHDES / NH DOT / UNH	Coastal Flooding / Inland Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. Current mapping efforts in place; asset inventory has not been completed. - <b>New Item #18</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
33	31	NH DOT to identify, analyze, and create design solutions for repeated areas of road closures.	Ongoing	NH DOT	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #36</b>
34	31	Promote funding and resources for land acquisition, conservation planning, land management programs, and land stewardship in areas at risk of loss or degradation due to sea level rise.	Ongoing	Multi-agency	Coastal Flooding / Inland Flooding	In-Kind, FMA, PDM, and HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #39</b>
35	31	Provide generators at selected state-owned fuel locations to provide fuel to emergency vehicles during an extended power outage.	Ongoing	NH DOT	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #13</b>
36	31	Maintain Program Administration by State (PAS) status allowing for the continued authority to Formally Approve Local Hazard Mitigation Plans.	New	NH HSEM	Natural Hazards	HMGP	Item continued - Stakeholders deemed still an active item. PAS has been suspended since 2018 Plan. - <b>New Item #11</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
37	31	Promote the installation of regionally and locally significant staff gauges, tidal gauges, and other such monitoring equipment as determined to be necessary by local EMDs, Road Agents, etc.	Ongoing	USGS/NH HSEM/ Silver Jackets	Coastal Flooding / Inland Flooding	In-Kind, USGS	Item continued - Stakeholders deemed still an active item. - <b>New Item #52</b>
38	31	The SHMO will work with local communities, contractors, and regional planning commissions to develop and maintain lists of public and private facilities considered essential to regional and local interests during/after events within their Local Hazard Mitigation Plans.	Ongoing	NH HSEM	All Hazards	PDM, HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #5</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
39	31	Promote and educate in the development of increased standards for those facilities that maybe at risk from natural, human-caused, and technological hazards.	Ongoing	Multi-Agency	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. Removed "human-caused, and technological". - <b>New Item #35</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
40	31	State agencies will continue the collaborative development of information dissemination opportunities via many outreach methods, including but not limited to: broadcast media, social media platforms, ReadyNH.gov, Public Service Announcements (run on closed cable networks and broadcast media), printed materials, direct outreach through NH HSEM's Field Services Section, The Ready Preparedness Pup Program for school aged children, and exhibits at conferences and workshops in an effort to educate the State in regards to preparedness, response, recovery and mitigation.	Ongoing	Multi-Agency	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #20</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
41	30	NH HSEM will continue to work with the States Interagency Hazard Mitigation Team (IHMT) to prioritize and select projects which are cost beneficial and address the State's mitigation goals and objectives.	Ongoing	NH HSEM / IHMT	natural hazards	FMA, PDM, and HMGP	Item removed - Stakeholders deemed a State Capability.
42	30	Increase understanding about flood risks and related impacts at the confluence where freshwater and tidal waters meet in estuarine systems, from wave action, and from changing sediment dynamics	New	NHDES - Coastal Program	Coastal Flooding /Inland Flooding	In-Kind, NH Coastal Resilience Grants	Item continued - Stakeholders deemed still an active item. - <b>New Item #2</b>
43	30	Continue to develop and maintain GIS layers as a multi-agency collaborative effort to capture data, including but not limited to:  • NH DES-NHGS: Stream Crossing Initiative geodatabase.	Ongoing	DNCR-DHR / NHDES / NH HSEM	All Hazards	In-Kind, FMA, PDM, and HMGP  CDC, EMPG	Item continued - Stakeholders deemed still an active item. - <b>New Item #33</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
		<ul style="list-style-type: none"> <li>• NH DNCR-DHR: Sensitive natural and cultural resources and historical and archeological properties, and incorporation of archeological site data in the new Electronic Mapping and Management Information Tool (EMMIT) and promote use by municipalities, local heritage commissions, historical societies, and preservation professionals.</li> </ul>					
		<ul style="list-style-type: none"> <li>• NH DNCR-DFL: LANDFIRE data layers (used to determine statistical probabilities of wildland fires).</li> </ul>					

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
		<ul style="list-style-type: none"> <li>NH DES Coastal Program: Coastal hazards (maximum flooding extent, nuisance flooding extent, etc.), locations of natural and manmade protective systems and barriers (salt marshes, seawalls, etc.), ongoing study locations, and others. Data collected in partnership with NH Fish and Game, UNH Sea Grant, and GRANIT.</li> <li>NH HSEM: Maintain Hazard Mitigation Assistance (HMA) Program funded project layer.</li> </ul>					
44	30	NH HSEM and DPHS will continue to co-host the Annual Emergency Preparedness Conference, which includes the promotion and education of mitigation.	Ongoing	NH HSEM / DPHS	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. Event was cancelled starting in 2020 due to COVID-19. - <b>New Item #9</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
45	30	NH DNCR-DHR will continue its State Conservation Rescue Archeology Program (SCRAP), which is the recruitment and training field survey teams to expedite historical site reviews in an emergency.	Ongoing	NH DNCR-DHR	All Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #49</b>
46	30	NH DNCR-DHR will continue to complete and maintain a statewide assessment of deficiencies in survey data (done by town, but phase by county if necessary)	Ongoing	NH DNCR-DHR	Natural Hazards	In-Kind, NH Coastal Resilience Grants	Item continued - Stakeholders deemed still an active item. - <b>New Item #50</b>
47	30	Recommend a comprehensive planning and zoning policy such as development setbacks and limits on density and infrastructure in coastal and transitional zones to consider vulnerability to sea level rise and saltwater intrusion.	Ongoing	NH CAW / NHDES	Coastal Flooding / Inland Flooding	FMA, PDM, and HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #28</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
48	30	Disseminate information with respect to the availability of the Hazard Mitigation Assistance (HMA) Programs, including emailed notifications, requests for Letters of Intent (LOIs) to eligible applicants, and by conducting applicant briefings as to the existence and status of funding and related grant funding requirements.	Ongoing	NH HSEM	Natural Hazards	In-Kind	Item removed - Stakeholders deemed a State Capability.
49	30	The State's Historic Preservation Officer (SHPO) and the NH DNCR-DHR will continue to inventory, catalogue and assess the State's important Archeological and Historical properties (including buildings, dams, bridges etc.).	Ongoing	NH DNCR-DHR / NH HSEM	All Hazards	In-Kind, FMA, PDM, and HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #48</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
50	29	Provide planning and related technical resources to facilitate the enhancement of Disaster Response and Recovery Plans to include Hazard Mitigation initiatives.	Ongoing	NH HSEM	All Hazards	In-Kind, USGS	Item removed - Stakeholders deemed item a Preparedness & Response item, not Mitigation
51	29	Sustain the enhancement of the gauging network as recommended by the USGS and NHDES-WD.	Ongoing	NHDES	Inland and Coastal Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #26</b>
52	29	Sustain the development of public/private partnerships in the planning for post-event recovery to promote a more resilient State.	Ongoing	NH HSEM / NHDES	All Hazards	EMPG	Item continued - Stakeholders deemed still an active item. - <b>New Item #51</b>
53	29	Sustain the implementation of the required annual State employee cyber training.	New	Multi-Agency	Cyber Event	In-Kind	Item removed - Stakeholders deemed item no longer necessary due to new 2023 FEMA guidance removing Technological Hazards.

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
54	29	NH DNCR-DHR, including the State's Historic Preservation Officer (SHPO), will continue their efforts to improve the protection of important historical properties against fire, vandalism, and flooding, among other hazards.	Ongoing	NH DNCR-DHR	All Hazards	In-Kind, EMPG	Item continued - Stakeholders deemed still an active item. - <b>New Item #47</b>
55	29	NH IAC will conduct vulnerability assessments and maintain a database for State critical infrastructure.	Ongoing	NH IAC, DHS	All Hazards	In-Kind	Item removed - Stakeholders deemed item a Preparedness & Response item, not Mitigation
56	29	Continue to develop and utilize within the Communicable Disease Control Section (CDCS) standard operating procedures for each reportable disease.	Ongoing	NH DHHS	Infectious Diseases	NH Coastal Resilience Grants, FMA, PDM, and HMGP	Item continued - Stakeholders deemed still an active item. - <b>New Item #43</b>

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
57	29	Provide technical assistance through funding and staff support to coastal communities to enhance current and future coastal hazard mitigation planning and activities	Ongoing	NHDES - Coastal Program, NOAA	Coastal Flooding / Inland Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #6</b>
58	29	Continue the development of local and regional river corridor stewardship programs such as the Rivers Management and Protection Program.	Ongoing	Multi-agency	Inland Flooding	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #29</b>
59	28	NH HSEM will make the State of NH Multi-Hazard Mitigation Plan Update 2018 available online as an interactive PDF through the NH HSEM Resource Center and other applicable State websites.	Ongoing	NH HSEM	All Hazards	In-Kind	Item removed - Stakeholders deemed a State Capability.
60	28	Sustain the dissemination of emergency information through the statewide 211 system.	Ongoing	NH HSEM / Granite United Way	All Hazards	In-Kind	Item removed - Stakeholders deemed a State Capability.

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
61	28	Enhance syndromic surveillance in schools	Ongoing	NH DHHS	Infectious Diseases	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #54</b>
62	28	Maintain collection and distribution of accurate weather and roadway information through the use of existing Road Weather Information System (RWIS). Enhance existing system through deployment of additional stations.	Ongoing	NH DOT	Natural Hazards	In-Kind	Item continued - Stakeholders deemed still an active item. Updated to reflect status - <b>New Item #30</b>
63	28	NHDOT will continue providing transfer switches on construction of new signals on projects.	Ongoing	NH DOT	All Hazards	In-Kind, EMPG	Item removed - Stakeholders deemed item a Preparedness item, not Mitigation
64	27	Receive and disseminate homeland security information from federal, state and local partners in accordance with annual federal information sharing requirements.	Ongoing	NH IAC	Terrorism/ Violence, Cyber, Mass Causality Incident	In-Kind, EMPG	Item removed - Stakeholders deemed item no longer necessary due to new 2023 FEMA guidance removing Human-Caused Hazards.

Action Number	Prioritization Score	Action	2018 Status	Responsible Agency/Party	Hazard(s)	Potential Funding	Change to 2023 Plan
65	26	NH IAC will educate state and local public safety and health personnel on CIKR asset protection and assistance programs	Ongoing	NH IAC	All Hazards	In-Kind	Item removed - Stakeholders deemed item a Preparedness & Response item, not Mitigation
66	25	Explore and implement the digitization of records across the State and consider assessment of current location of documentation with respect to hazard vulnerabilities.	New	Multi-Agency	All Hazards	In-Kind	Item removed - Stakeholders deemed item impossible to track or measure and thus to remove from 2023 Mitigation Actions.
67	25	Continue to expand the use of NH Electronic Disease Surveillance System (NH EDSS) to all investigating staff members at the local and state level.	Ongoing	NH DHHS	Infectious Diseases	In-Kind	Item continued - Stakeholders deemed still an active item. - <b>New Item #44</b>
68	25	Maintain video surveillance at select Turnpike Toll Plazas, Welcome Centers, Rest Areas, Park-n-rides, Transit Centers, and other critical assets.	Ongoing	NH DOT	All Hazards	In-Kind	Item removed - Stakeholders deemed item no longer necessary due to new 2023 FEMA guidance removing Human-Caused Hazards.

## Appendix D: County Data Sheets

This page intentionally left blank.

# Belknap County

Located just southeast of the geographic center of the state in New Hampshire's Lakes Region, Belknap County was established in 1840 from portions of Strafford County. The county was named for Dr. Jeremy Belknap, Dover Congregational Church minister and author of *The History of New Hampshire*, which chronicled the early history of the state. Belknap is one of two counties in the state without an interstate border; Merrimack is the other. A large part of Lake Winnepesaukee, all of Lake Winnisquam, and many smaller lakes cover nearly one-sixth of the county, the largest amount of inland water among New Hampshire's counties.

Belknap County contains 400.2 square miles of land area and 68.4 square miles of inland water area. Based on the 2010 Census population, the population density is 150.1 persons per square mile. Belknap County includes one city, Laconia, and ten towns. The county seat is Laconia.

**Population Trends:** Belknap County experienced its highest rate of growth from 1970 to 1980, when the population grew by 32.5 percent, adding 10,500 residents. Belknap ranked in the bottom third among all counties every census from 1790 to 1970, then rose to seventh, holding that rank ever since. Population increase in both 1990 and 2000 was just over 6,000 residents. Between 2000 and 2010, the rate of growth slowed a little more, increasing by 8.6 percent, adding 4,700 residents. Belknap County residents are generally older as well, having the third-highest median age in New Hampshire. The median age of women is higher than that of men, by one and a quarter years.

Population	(1-Year Population Estimates, US Census Bureau)

# Carroll County

Carroll County surrounds the north-south midpoint of the state's eastern border. Established in 1840, the county was named for Charles Carroll of Carrollton, Virginia, a signer of the Declaration of Independence. It adjoins Maine along a 53-mile, almost perfectly straight, line. About a quarter of the county is within the White Mountain National Forest. A ten-mile long thumb of land encompassing Crawford Notch and Hart's Location juts out between Cobs and Grafton Counties. There are no cities in Carroll County, the only county so lacking.

Carroll County contains 931.1 square miles of land area and 61.4 square miles of inland water area. Based on the 2010 Census population, the population density is 51.4 persons per square mile. Carroll County includes 18 towns and one unincorporated place, Hale's Location. The county seat is Ossipee.

**Population Trends:** The third smallest county in population, Carroll County is about the same in square miles as Merrimack County, but the population density is about a third of that for Merrimack. Between 1970 and 1980, Carroll County experienced a major population growth spurt, increasing by 50.6 percent. That was the highest rate of population growth for any county for any decennial period since 1950. The growth rate for Carroll County was the highest among the counties between 1990 and 2000 at 23.3 percent. At 52.3 years, Carroll has the highest median age in New Hampshire.

# Cheshire County

Cheshire County, one of the five original counties, occupies the southwest corner of the state. It is separated from Vermont by a 41-mile length of the Connecticut River, and borders Massachusetts along a 27-mile straight line to the south. Established in 1769, the county was named for Cheshire County in England. Cheshire is New Hampshire's median county. It ranks sixth among the ten counties in total area, land area, water area, population, and population density. Cheshire County is the location of Mount Monadnock, one of the most-hiked peaks in the world.

Cheshire County contains 707.0 square miles of land area and 22.4 square miles of inland water area. Based on the 2010 Census population, the population density is 109.1 persons per square mile. Cheshire County includes one city, Keene, and 22 towns. The county seat is Keene.

**Population Trends:** Over the last five decennial periods, Cheshire County has experienced population growth below the state average rate, with no significant growth spurts. Cheshire's population has ranked sixth among New Hampshire's counties for seven consecutive decades. The highest rate of increase was from 1960 to 1970, when the population grew by 20.8 percent. The county had its smallest population increase from 2000 to 2010, growing by 4.5 percent. While Cheshire County is similar in land area to Rockingham County, it is far less densely populated.

Population (1-Year Population Estimates, US Census Bureau)				
2019	2010	2000	1990	1980
76,085	77,117	73,825	70,121	62,116

# Coös County

Cobs County covers the top fifth of New Hampshire, sharing a 71-mile straight border with Maine to the east, an 85-mile border with Vermont to the west, and a 58-mile border with Canada to the north. Established in 1803, when it was separated from Grafton County, the county was named after the Indian word 'cowass' or 'kohass,' meaning 'crooked river' because of the bend in the Connecticut River. The White Mountain National Forest and Nash Stream State Forest cover a sizable portion of the county.

Cobs County contains 1,795.0 square miles of land area and 35.1 square miles of inland water area. Based on the 2010 Census population, the population density is 18.4 persons per square mile. Cobs County includes one city, Berlin, 19 towns, and 23 unincorporated places, 16 of which are unpopulated. The county seat is Lancaster.

**Population Trends:** Cobs County claimed the smallest population among New Hampshire's ten counties in 2019, and has held that position since the 1990 Census. Prior to 1980, Belknap,

Carroll, and Sullivan Counties all had fewer residents. Population in Cobs County grew between 1950 and 1960, then experienced its greatest loss of population between 1960 and 1970, decreasing by 7.7 percent. After a small gain between 1970 and 1980, the county decreased in population over the next three

Population	(1-Year Population Estimates, US Census Bureau)

# Grafton County

Grafton County occupies the west central border of the state, halfway between north and south. It is separated from Vermont by an 89-mile stretch of the Connecticut River. Like Cobs County, Grafton covers nearly one-fifth of the state. It was one of the five original counties established in 1769, and was comprised of all of the current Grafton and Cobs Counties until 1803. The county, like the town, takes its name from Augustus Henry Fitzroy, Duke of Grafton, an enthusiastic supporter of the American cause prior to the Revolution. The county contains a substantial amount of inland water, most of which is Newfound Lake or part of Squam Lake, and includes half of the White Mountain National Forest.

Grafton County contains 1,709.0 square miles of land area and 40.8 square miles of inland water area. Based on the 2010 Census population, the population density is 52.2 persons per square mile. Grafton County includes one city, Lebanon, 38 towns, and one unincorporated place, Livermore. The county seat is Haverhill.

**Population Trends:** Over the last five decennial periods, Grafton County has experienced population growth below the state average rate, with no substantial growth spurts. The county's fastest rate of growth was from 1970 to 1980, when the population increased by 19.8 percent. Grafton is the second largest county in land area, following Cobs County. Population density for Grafton County is about equal to that of Carroll County, which is 0.8 square miles smaller.

Population (1-Year Population Estimates, US Census Bureau)				
	2019	2010	2000	1990
	89,886	89,118	81,743	74,929

Demographics (2015-2019 5-Year Average, ACS)		
By Gender:	Male	Female
Total	44,210	45,567
18 years and over	36,650	38,414
65 years and over	8,384	9,580
Median Age (years)	41.3	44.7
By Age Group:		
Under age 5		3,712
Age 5 to 19		15,382
Age 20 to 34		18,451
Age 35 to 54		20,347
Age 55 to 64		13,921
Age 65 and over		17,964
Median Age (years)		43.2

Due to differing methodologies, 1-Year Population Estimates and 5-Year Average ACS Demographics data may not match.

# Hillsborough County

Hillsborough County occupies the south central portion of the state along a 36-mile border with Massachusetts. Hillsborough was one of the original five counties, created by the Provincial Act in 1769, authorized by Governor John Wentworth. It was named in honor of Wills Hill, Earl of Hillsborough, and a councilor of King George III. The town of Hillsborough was the birthplace of Franklin Pierce, the only United States president from New Hampshire. The town, first granted in 1735 and incorporated in 1772, was probably named not for the Earl, but for landowner Colonel John Hill.

Hillsborough County contains 876.1 square miles of land area and 16.1 square miles of inland water area. Based on the 2010 Census population, the population density is 457.4 persons per square mile, highest among the counties. Hillsborough County includes two cities, Manchester and Nashua, and 29 towns. The county seat is Nashua; services are also available in Manchester.

**Population Trends:** Hillsborough County has been the state's largest since the 1850 Census, and was the first county to exceed 100,000 residents, which it did in 1900. It was also the first county to exceed 200,000 residents (1970), 300,000 residents (1990), and 400,000 residents (2010). After population increases of at least 20 percent per decade between 1960 and 1990, the rate of growth for Hillsborough County has slowed, increasing by 13.4 percent from 1990 to 2000, and by just 5.2 percent from 2000 to 2010. Hillsborough County residents are generally younger, with a median age of 40.7.

Population	(1-Year Population Estimates, US Census Bureau)			
	2010	2000	1990	1980
2019	417,025	400,721	380,841	335,838

# Merrimack County

Nestled in the south central portion of the state, equidistant from both the Maine and Vermont borders, Merrimack County is one of two counties that has no interstate borders; Belknap is the other. It is the location of Concord, the state capitol, which is tucked into a bend in the Merrimack River. The county takes its name from the Merrimack River, whose name was adapted from an Abnaki Indian word meaning "deep." The county was formed in 1823 from towns in Hillsborough and Rockingham counties.

Merrimack County contains 934.1 square miles of land area and 22.3 square miles of inland water area. Based on the 2010 Census population, the population density is 156.8 persons per square mile. Merrimack County includes two cities, Concord and Franklin, and 25 towns. The county seat is Concord.

## Population

Merrimack County has long been the third largest county in population, and is about equal in square miles of land to Carroll County. It is, however, the fourth most densely populated county, with less than half the population density of Strafford County, the third highest. Population in Merrimack County increased at about the same rate for three consecutive decades from 1960 to 1990, with population growth rates of 19.4 percent, 21.5 percent, and 22.3 percent. Since then the rate of growth has slowed, increasing by 13.3 percent between 1990 and 2000, 7.5 percent between 2000 and 2010 and 3.4 percent between 2010 and 2019.

Population	(1-Year Population Estimates, US Census Bureau)			
2019	2010	2000	1990	1980
151,391	146,445	136,225	120,240	98,302

## Demographics (2015-2019 5-Year Average, ACS)

By Gender:	Male	Female
Total	73,860	76,057
18 years and over	59,117	61,751
65 years and over	11,756	14,560
Median Age (years)	41.3	44.3
By Age Group:	Under age 5	7,134
	Age 5 to 19	26,159
	Age 20 to 34	27,939
	Age 35 to 54	39,136
	Age 55 to 64	23,233
	Age 65 and over	26,316
	Median Age (years)	42.8

Due to differing methodologies, 1-Year Population Estimates and 5-Year Average ACS Demographics data may not match.

# Rockingham County

Covering the southeast corner of the state, Rockingham County contains all of the state's 17 miles of Atlantic Ocean coastline, the shortest coastline of any state in the US. The Piscataqua River and Portsmouth Harbor separate it from Maine on a nine-mile stretch to the northeast, and it shares a 56-mile border to the south with Massachusetts. Rockingham County includes four of the Isles of Shoals, which are annexed to the town of Rye. Rockingham was one of the five original counties established in 1769, and at one time covered Concord and all Merrimack County towns east of the Merrimack River. It was named for Charles Watson-Wentworth, Marquis of Rockingham, a staunch friend of the colonies. The seacoast town of Rye was one of the first two places to be settled in New Hampshire.

Rockingham County contains 694.7 square miles of land area and 100.4 square miles of inland water area. Based on the 2010 Census population, the population density is 425.0 persons per square mile. Rockingham County includes one city, Portsmouth, and 36 towns. The county seat is Brentwood.

**Population Trends:** Rockingham County was the location of the first settlements and seat of government for the young State of New Hampshire, and had the largest population from the first Census in 1783 through 1840. After 160 years of modest growth, this county saw a population explosion between 1950 and 1990. Population increased over 40 percent each decade from 1950 to 1970, added 37 percent from 1970 to 1980, and 29 percent from 1980 to 1990. The rate of growth has slowed since, growing by 12.8 percent from 1990 to 2000, 6.4 percent from 2000 to 2010, and 4.9 percent from 2010 to 2019.

Population	(1-Year Population Estimates, US Census Bureau)				
	2019	2010	2000	1990	1980
	309,769	295,223	277,359	245,845	190,345

Demographics	(2015-2019 5-Year Average, ACS)	
By Gender:	Male	Female
Total	151,844	154,515
18 years and over	120,960	125,197
65 years and over	24,141	28,629
Median Age (years)	43.0	45.7

By Age Group:	Under age 5	13,957
	Age 5 to 19	52,492
	Age 20 to 34	52,983
	Age 35 to 54	84,248
	Age 55 to 64	49,909
	Age 65 and over	52,770
	Median Age (years)	44.5

Due to differing methodologies, 1-Year Population Estimates and 5-Year Average ACS Demographics data may not match.

# Strafford County

Strafford County is located on the eastern border of the state, south of center. A 45-mile stretch of the Salmon Falls River pouring into the Piscataqua River separates the county from Maine. It is the only county with three cities—Rochester, Dover, and Somersworth. It was one of the five original counties established in 1769, once encompassing all of Belknap County and the portion of Carroll County not in the White Mountain National Forest. The county was named for the Earl of Strafford, a title held by the Wentworth family in England who were prominent in New Hampshire politics in colonial days. Dover, along with Rye, was one of the first places to be settled in New Hampshire.

Strafford County contains 369.0 square miles of land area, the smallest among the counties, and 15.0 square miles of inland water area. Based on the 2010 Census population, the population density is 333.7 persons per square mile. Strafford County includes three cities, Dover, Rochester, and Somersworth, and ten towns. The county seat is Dover.

**Population Trends:** Though the smallest in land area, Strafford County is the third highest in population density. Site of one of the state's first settlements, population in this county grew fairly quickly until the Civil War. After that it was 1970 to 1980 before the population increased by 21.3 percent. Between 1980 and 1990 the county's population grew by 22 percent, then growth slowed again, increasing by 7.7 percent between 1990 and 2000. Strafford County, location of the University of New Hampshire, ranks as the state's youngest county, with a median age of 36.9 — 3.6 years younger than the next oldest, Hillsborough County.

# Sullivan County

Sullivan County is located on the western border of the state, south of center. It borders Vermont to the west with a 36-mile stretch of the Connecticut River. Sullivan County came into existence in 1827, made up of communities taken from Cheshire County. The name was in honor of General John Sullivan, a Revolutionary War hero, and member of the Continental Congress, Adjutant General to George Washington, and Major General of the Northern Army. He was elected "President" of New Hampshire in 1786, and the town of Sullivan in Cheshire County was named for him in 1787.

Sullivan County contains 537.3 square miles of land area and 14.7 square miles of inland water area. Based on the 2010 Census population, the population density is 81.4 persons per square mile. Sullivan County includes one city, Claremont, and 14 towns. The county seat is Newport.

**Population Trends:** Sullivan County is moderately small in both square miles and population, and holds the fourth-lowest population density among the counties. The county has not experienced any dramatic increases or decreases in population seen by several other counties. Decennial population growth was above ten percent only three times in Sullivan County history: 1930, 1970, and 1980. Since 1950, the population has grown well below the statewide average rate. Over the last three decades Sullivan had the second-smallest population increases among the counties; only Coös County had a lower rate of growth.

## Appendix E: Human Caused and Technological Hazards

These threats and hazards are not the focus of Hazard Mitigation. The developers of this plan are committed to maintaining the information in the appendix as a reference for local communities and the State for emergency preparedness planning.

This page intentionally left blank.

## **Hazard: Aging Infrastructure**

### **Definition:**

The continued regression of the State's physical systems including, but not limited to roads and bridges, culverts, utilities, water, and sewage.

### **Location:**

The entire State of New Hampshire is vulnerable to Aging Infrastructure.

### **Background and evolving hazard information:**

Similar, to states throughout the Nation, New Hampshire suffers from Aging Infrastructure. The American Society of Civil Engineers released its [2017 report card](#) bestowing the State with a C - rating overall.<sup>1</sup> The report further identifies that the increase in annual number of vehicle miles traveled has led to more rapid deterioration of roads and bridges. The average lifespan for a bridge is around fifty years, and the current average age of state-owned bridges in New Hampshire is 52-56 years.

The State's dams and wastewater infrastructure are equally weakening. Many dams in the state, particularly those on the large lakes, were constructed in the mid-1800s to provide waterpower to fuel the great Industrial Revolution-era mills of New Hampshire and Massachusetts. In New Hampshire, the risks associated with many dams are increasing because of: 1) the increasing age of the inventory of dams in the state (the average age of the dams in New Hampshire is 87 years; 2) the number that were built before dam safety engineering standards were developed (over 60% of the dams were built before 1960); 3) businesses and homes that have been built downstream from dams in areas that would be flooded if the dams were to fail; 4) the increasingly frequent occurrence of extreme rainfall events due to climate change; and 5) the lack of needed/required maintenance on many privately owned and some publicly owned dams.

NHDES established a Resilience & Adaptation Program to aid municipalities and utilities with identifying natural disaster and climate related vulnerabilities within their systems and assisting with corrective implementation measures. The program covers both wastewater and drinking water infrastructure and integrates with the existing NHDES asset management program framework. Typical areas of assistance are vulnerability assessments, integration of infrastructure vulnerability data into asset management programs and emergency management related plans, identifying funding resources, training and community outreach, and design strategies to address target concerns.

New Hampshire continues to employ methods of repairing, replacing, and upgrading aging infrastructure, but obstacles such as funding and staff shortages prove to be a recurring nuisance.

**Previous Occurrences:**

Since 2009, 113 municipal bridge posting/closure events have occurred due to aging infrastructure. Over the past ten years, the State has closed/posted the following bridges due to aging infrastructure:

Bridge	Year of Occurrence	Closed/Posted
Portsmouth 211/114 Stark St over US 1 Bypass)	2013	Down-posted to “Weight Limit 15 Tons”
Lyme 053/112 (East Thetford Road over Connecticut River)	2014	Down-posted to “Weight Limit 15 Tons”
Andover 143/077 (US 4 over Blackwater River)	2014	Reduced to “one lane centered”
Portsmouth 247/084 (“Memorial Bridge” – US 1 over Piscataqua River)	2009; 2011	Down-posted to “Weight Limit 10 Tons”; CLOSED
New Castle 066/071 (New Hampshire 1B over Little Harbor)	2011	Down-posted to “Weight Limit 15 Tons”
Walpole 062/052 (“Vilas Bridge” – Bridge St over Connecticut River)	2009	CLOSED
Portsmouth 251/108 (“Sarah Long Bridge” – US 1 Bypass over Piscataqua River)	2009	Down-posted to “Weight Limit 20 Tons”
Stewartstown 054/163 (Bridge St over Connecticut River)	2008	Down-posted to “Weight Limit 10 Tons”

## **Hazard: Cyber Event**

### **Definition:**

As described by Weeks (2022) in the *New Hampshire Statewide Information Security Manual* (SISM), a cyber incident is any event that occurs in or through information systems that may compromise the confidentiality, integrity, availability, and privacy of the State's information and information systems.<sup>1</sup>

Cyber incidents may look like:

- An attacker commands a botnet to send high volumes of connection requests to a web server, causing it to crash. (Availability)
- Users are tricked into opening a "quarterly report" sent via email that is malware; running the tool has infected their computers and established connections with an external host. (Confidentiality, Integrity)
- An attacker obtains sensitive data and threatens that the details will be released publicly if the organization does not pay a designated sum of money. (Confidentiality, Privacy)
- A user provides or exposes sensitive information to others through peer-to-peer file sharing service. (Confidentiality, Privacy)

### **Location:**

The entire State of New Hampshire is vulnerable to a Cyber Event.

### **Background and Evolving Hazard Information:**

The State of New Hampshire continues to increase its reliance on computers and the Internet. With this upturn in dependence comes the escalated risk for a cyber event to occur. Cybersecurity encompasses technologies such as broadband, local, and wireless networks, as well as standards and processes which help protect networks, computers, systems and information from attack, damage, or unauthorized access. Potential cyber event targets, include but are not limited to, critical infrastructure; the public and private sector; and New Hampshire citizens via cyberattacks such as security breaches, spear phishing, and social media fraud.

The New Hampshire Cyber Integration Center (NHCIC) was established in 2016 and is authorized under NH [Executive Order 2016-06](#). The NHCIC is located within the Incident Planning and Operations Center (IPOC) and managed by the Division of Homeland Security and Emergency Management, the NHCIS:

- serves as the unified state center for coordinating cybersecurity monitoring, sharing information, performing cybersecurity threat analysis, and promoting shared and real-time situational awareness between and among executive branch agencies and departments.
- integrates state employees from various agencies whose shared responsibilities include

the monitoring of networks, sharing of information and situational awareness, and coordination of response, mitigation, and recovery efforts to protect against cyber-attacks and secure private personal information.

- manages all known or suspected cybersecurity incidents within state agencies, or within any vendor acting as an agent of the State; and,
- establish the NHCIC Executive Oversight Committee (NHCIC OC) to oversee the operations of the NHCIC and the implementation of its strategic plan and governance.

The State of New Hampshire operates on the principle of “Baseline-Plus” for security Controls (Weeks, 2022).

**Baseline:**

The Baseline is for all State-owned, leased, licensed, or managed information systems, system components, and system services are required to implement the controls defined by [NIST Special Publication 800-171 R2, Protecting Controlled Unclassified Information in Nonfederal Systems and Organizations](#).

**Baseline Plus:**

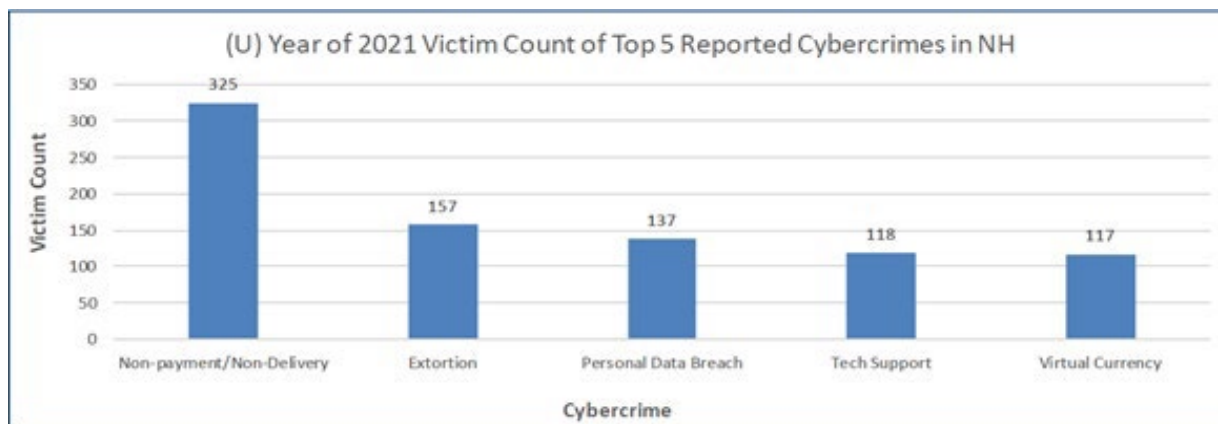

Individual agencies have various legal, regulatory, and contractual compliance requirements based on their business services and operations, and the information they collect, store, process, and transmit. Some commonly applicable statutory and regulatory requirements include:

[IRS Publication 1075, Safeguards for Protecting Federal Tax Returns and Return Information](#),  
[Health Insurance Portability and Accountability Act \(HIPAA\)](#),  
[Minimum Acceptable Risk Standards for Exchanges, version 2.0 \(MARS-E\)](#),  
[Family Education Rights Privacy Act \(FERPA\)](#),  
[Payment Card Industry – Data Security Standards \(PCI-DSS\)](#),  
[Criminal Justice Information Services \(CJIS\)](#),  
[European Union General Data Protection Regulation \(GDPR\)](#),  
[California Consumer Privacy Act \(CCPA\)](#),  
[Children’s Online Privacy Protection Act \(COPPA\)](#).

To satisfy the control objectives for the above statutory and regulatory requirements, and to provide a uniform baseline across Agencies that are subject to these levels of compliance, all State-owned, leased, licensed, or managed information systems, system components, and system services subject to the above are required to, at a minimum, implement Moderate level controls as defined by [NIST Special Publication 800-53 Revision 5, Security and Privacy Controls for Information Systems and Organizations](#).

Per the Federal Bureau of Investigation, the threat posed by cybercrime is diverse, multifaceted, and widespread, stems from a variety of actors, including nation-state actors, lone cybercriminals, hacktivists and more.<sup>2</sup> As noted in the FBI’s Internet Crime Complaint Center’s (IC3) 2021 Internet Crime Report, “In 2021, America experienced an unprecedented increase in cyber-attacks and malicious cyber activity. These cyber-attacks compromised businesses in an

extensive array of business sectors as well as the American public” (IC3 p. 3). In 2021, 1,935 cybercrime complaints were made to the FBI’s IC3 from New Hampshire, with reported victim losses totaling \$24,213,695.

***Victim Count by Type of Cybercrime for New Hampshire.***

The costliest New Hampshire crime, which also coincides with national trends, was Business Email Compromise/Email Account Compromise (BEC/EAC) (IC3 p.27). While BEC/EAC account for the costliest cybercrimes in New Hampshire, the most reported internet crime in the state was nonpayment/non-delivery of goods with a total of 325 reported incidents. (IC3 p.26) It is important to note that IC3 data is reported by victims on a voluntary basis and is therefore not all encompassing. It is very likely that cybercrimes are underreported, and we assess that this trend will almost certainly continue in the future.

<b><u>IC3 Crime Type Definitions</u></b>	
<b>Business Email Compromise/Email Account Compromise (BEC/EAC):</b>	BEC is a scam targeting businesses working with foreign suppliers and/or businesses regularly performing wire transfer payments. EAC is a similar scam that targets individuals. These sophisticated scams are carried out by fraudsters compromising email accounts through social engineering or computer intrusion techniques to conduct unauthorized transfer of funds.
<b>Confidence Fraud/Romance:</b>	A perpetrator deceives a victim into believing the perpetrator and the victim have a trust relationship, whether family, friendly or romantic. As a result of that belief, the victim is persuaded to send money, personal and financial information, or items of value to the perpetrator or to launder money on behalf of the perpetrator. Some variations of this scheme are romance/dating scams or the grandparent’s scam.
<b>Tech Support:</b>	Subject posing as technical or customer support/service.
<b>Extortion:</b>	Unlawful extraction of money or property through intimidation or undue exercise of authority. It may include threats of physical harm, criminal prosecution, or public exposure.
<b>Non-Payment/Non-Delivery:</b>	In non-payment situations, goods and services are shipped, but payment is never rendered. In non-delivery situations, payment is sent, but goods and services are never received.
<b>Virtual Currency:</b>	A complaint mentioning a form of virtual cryptocurrency, such as Bitcoin, Litecoin, or Potcoin.

***IC3 Crime Type Definitions.***

### **Extent:**

There is no universal method for measuring the extent of a cyber incident; however, proxy data can be used to determine the extent of an incident. These factors include, but are not limited to:

- Number of users without services.
- Number of devices affected by the incident.
- Time to restore services.
- Number of victims of data breach.
- Cost of additional resources required to respond to the incident.
- Extent of cascading impacts. An event is typically referred to, after the fact, as the greatest extent experienced, i.e., the greatest number of customers without services throughout the incident.

### **Impacts:**

As described by Weeks (2022) in the Statewide Information Security Manual (SISM), the following impact levels are assigned to cyber incidents:

**Low:** The loss of confidentiality, integrity, or availability that could be expected to have a limited adverse effect on operations, assets, individuals, other organizations, or the State of New Hampshire, such as:

- Causes a degradation in mission capability to an extent and duration that the organization can perform its primary functions, but the effectiveness of the functions is noticeably reduced.
- Results in minor damage to organizational assets.
- Results in minor financial loss.
- Results in minor harm to individuals.

**Moderate:** The loss of confidentiality, integrity, or availability that could be expected to have a serious adverse effect on operations, assets, individuals, other organizations, or the State of New Hampshire, such as:

- Causes a significant degradation in mission capability to an extent and duration that the organization can perform its primary functions, but the effectiveness of the functions is significantly reduced.
- Results in significant damage to agency assets.
- Results in significant financial loss.
- Results in significant harm to individuals that does not involve loss of life or serious life-threatening injuries.

**High:** The loss of confidentiality, integrity, or availability that could be expected to have a severe or catastrophic adverse effect on operations, assets, individuals, other organizations, or the State of New Hampshire, such as:

- Causes a severe degradation in mission capability to an extent and duration that the organization can perform its primary functions, but the effectiveness of the functions is significantly reduced.
- Results in major damage to organizational assets.
- Results in major financial loss.
- Results in severe or catastrophic harm to individuals involving loss of life or serious life-threatening injuries.

## **Hazard: Known and Emerging Contaminates**

<b>Hazard Overview: Known and Emerging Contaminates</b>	
<b>HIRA Risk</b>	<b>High</b>
<b>Future Probability</b>	<b>High</b>
<b>Counties at Risk</b>	<b>All</b>

### **Definition:**

Contaminants in drinking water include naturally occurring contaminants associated with the geology in a given region and known man-made contaminants associated with nearby land use activities. Some contaminants are considered emerging contaminants. Emerging contaminants are chemicals that historically have not been monitored in drinking water due to the lack of laboratory capabilities to detect the compounds or a lack of knowledge about the use of certain compounds and their potential to cause human health impacts. Emerging contaminants are particularly concerning to the public because the potential health impacts of these are sometimes uncertain.

### **Location:**

The drinking water for the entire State of New Hampshire is at risk for natural and man-made contaminants. Approximately 55 percent of New Hampshire's population obtains its drinking water from federally and State regulated public water systems, with the remaining residents relying on private, household drilled or dug wells for their drinking water supply. State and federal agencies have conducted studies in New Hampshire that map the probability of detecting unsafe levels of many natural contaminants in groundwater throughout the State. These studies are not an adequate substitute for actually testing at an individual drinking water source because natural contaminants can occur in groundwater anywhere in New Hampshire. The New Hampshire Department of Environmental Services (NHDES) oversees the monitoring and management of many locations where contamination has been detected in groundwater at elevated levels. Recent discoveries of emerging contaminants in New Hampshire show that groundwater and surface water sources of drinking water near certain types of industries or contamination sites are at an increased risk for contamination.

### **Background and Evolving Hazard Information:**

Emerging contaminants have become a topic of increased political debate and scientific study across the Country following the Flint, Michigan water crisis that occurred because of a decision to change the source of their public drinking water supply. The new water source was corrosive in nature and, when fed through the aged lead supply pipes, caused contamination of the drinking water throughout much of the city.

The NHDES estimates that more than 46 percent of New Hampshire residents rely on private

wells for drinking water at home. While homes served by a public water supply benefit from federal regulations requiring regular testing for contaminants, it is the responsibility of private well owners to regularly test their water source and, if needed, treat their well water. Certain contaminants found in New Hampshire's groundwater occur naturally due to geologic or soil conditions, while others are associated with human activities. For example, arsenic and radon are common contaminants found in bedrock and, consequently, in well water. Potential human sources of contamination include leaking underground fuel tanks, chemical spills, closed landfills, road salt and other land uses. Regardless of the source of contamination, water must be tested and treated to ensure it is safe to drink.

### **Naturally Occurring Contaminants**

Trace elements, such as arsenic, lead, manganese and uranium can be particularly worrisome when found in drinking water obtained from private wells. Recently, the U.S. Geological Survey (USGS) and U.S. Environmental Protection Agency (EPA) New England conducted a trace metals study on 232 private well water samples in southeastern New Hampshire.

The key findings in this study included the following:

Nearly 3 out of 10 (28 percent) of water samples contained trace metal concentrations that exceeded one or more of the U.S. EPA's drinking water standards.

As of 2010, estimates of the numbers of residents in the study area that may have private wells in bedrock aquifers that supply water with trace-metal concentrations exceeding the standards are as follows:

- 8,600 people have lead exceeding 15 µg/L
- 7,500 people have uranium exceeding 30 µg/L
- 14,900 people have manganese exceeding 300 µg/L

Exposure to contaminants through drinking water can have a variety of adverse health effects. Some contaminants, such as certain strains of *E.coli* bacteria or high levels of nitrates, can result in immediate illness, such as gastroenteritis. Other contaminants, when consumed over a long period of time at low doses, increase the risks for developing certain forms of cancer, cardiovascular diseases, and neurological disorders.

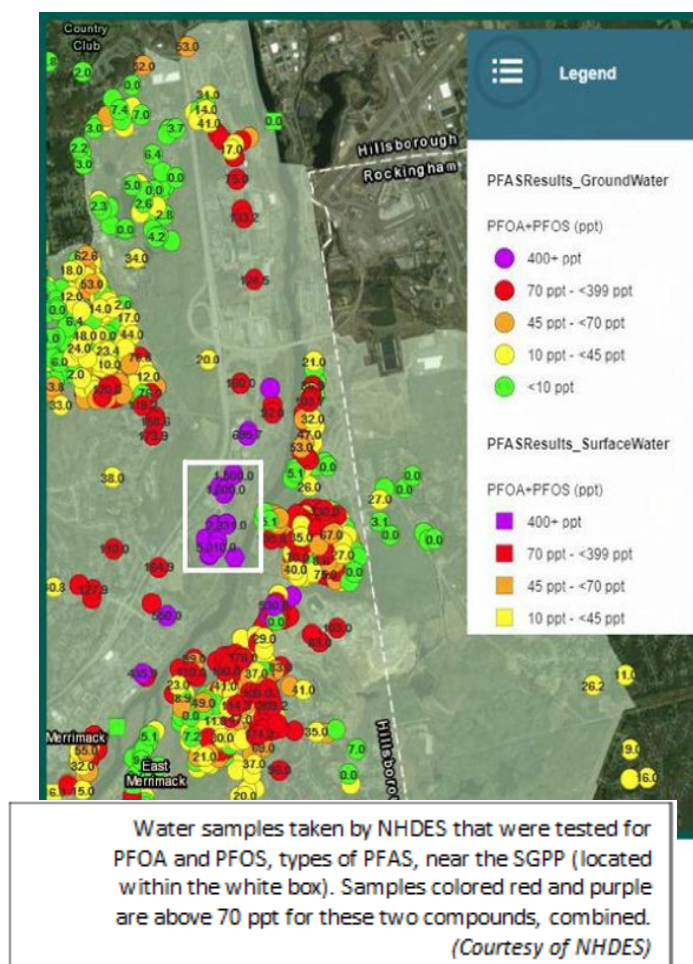

Among potential private well water contaminants, arsenic is of particular concern in New Hampshire. Arsenic has been linked to cancer in humans. Based on the potential adverse effects of arsenic on the health of humans and the frequency and level of arsenic occurrence in public drinking water systems, the EPA has set the arsenic maximum contaminant level (MCL) for public drinking water systems at 10 parts per billion (ppb).

Arsenic is naturally occurring and quite common in New Hampshire's groundwater, and health studies of New Hampshire residents have demonstrated the connection between arsenic and the increased prevalence of conditions such as bladder and other cancers and developmental effects on children. More than one-third of the community water systems in New Hampshire have a

measurable amount of arsenic in their water. The U.S. EPA typically sets MCLs for drinking water contaminants at a level at which a lifetime of exposure would result in one excess cancer in 1,000,000 (one million) people exposed. However, the U.S. EPA makes exceptions in cases where the technology is not readily available to detect the contaminant at extremely low levels or to remove the contaminant (treat the water) to such low levels. For some contaminants, the U.S. EPA has established drinking water MCLs with cancer risks in the 10-in-a-million to 100-in-a-million range. The 10 ppb MCL for arsenic is associated with a far greater risk, 3,000 in a million (roughly 1 in 300). A 2014 report by researchers at Dartmouth College estimated that exposure to arsenic in drinking water from private wells can be blamed for 830 cancer cases in the current population. The report also stated that nearly half of private well users have never tested their water for arsenic (Borsuk, et al. 2015: Arsenic in Private Wells in NH). There may be 41,000 people in just the counties of Merrimack, Strafford, Hillsborough, and Rockingham who are drinking water with arsenic levels above the EPA standard.

### Man-made Contaminants

Man-made chemicals that have been historically recognized to impact some groundwater and surface water sources of drinking water include volatile organic compounds, pesticides, semi-volatile compounds, nitrates/nitrites, metals, and radionuclides. Sites where these chemicals have been detected or known to have been released are managed under a comprehensive regulatory program that ensures nearby sources of water are not contaminated or that contaminated sources of drinking water are mitigated. The regulatory program also develops a remedial response plan to restore surface and groundwater quality.

### Emerging Contaminants

Emerging contaminants have been detected in surface and groundwater that are sources of drinking water in the State of New Hampshire, and citizen awareness of this issue has grown exponentially in recent years. Per- and polyfluoroalkyl substances, more commonly referred to as PFAS, are a class of chemicals considered emerging contaminants that consists of thousands

of compounds. NHDES regulates four of these chemicals in groundwater and drinking water. In 2019, NHDES adopted administrative rules that establish health-based Maximum Contaminant Levels (MCLs) and Ambient Groundwater Quality Standards (AGQS) for four PFAS that include: 12 ppt for perfluorooctanoic acid (PFOA), 15 ppt for perfluorooctane sulfonic acid (PFOS), 18 ppt for perfluorohexane sulfonic acid (PFHxS), and 11 ppt for perfluorononanoic acid (PFNA). While enforcement of these standards was temporarily stayed by a court injunction, the MCLs and AGQS were established as matter of law by House Bill 1264, which became effective July 23, 2020. MCLs are drinking water quality standards that non-transient public water systems (water systems serving the same 25 people more than 6 months per year) must comply with. An AGQS is the standard used to require site investigations and remedial action at and around contamination sites. AGQS are also used to identify where the provision of alternate drinking water is required when waste sites have contaminated private and/or public water supply wells.

One of the first PFAS sites in New Hampshire to garner widespread media and public attention was related to the discovery of, at unusually elevated levels in groundwater derived from one public water supply well at the Pease Tradeport in Portsmouth, NH. These compounds were also found in private and public water supply wells surrounding the Saint-Gobain Performance Plastics Plant (SGPP) in Merrimack, NH. An investigation into this issue began in March of 2016 after SGPP notified NHDES of PFOA contamination in samples taken from water faucets at the plant that were served by the Merrimack Village District Water System. The detection of PFOA in the water system prompted NHDES to immediately initiate an investigation into the source and extent of PFAS. This included an investigation of the SGPP facility and a major effort to sample water supply wells expanded outward from the facility into the surrounding communities of Bedford, Hudson, Litchfield, Londonderry, Manchester, and Merrimack. The sampling effort has identified more than 1,000 properties with PFOA in excess of the AGQS of 12 ppt. This has resulted in the provision of bottled water and alternate water remedies including filtration systems and/or connections to municipal water to many impacted properties.

In 2022, NHDES implemented a PFAS Removal Rebate Program for Private Wells that provides funding for eligible private well owners to install a treatment system or connect to a water system. NHDES will provide a one-time rebate to private well users for up to \$5,000 for the installation of PFAS treatment (point-of-use or point-of-entry) or up to \$10,000 for a service connection to a public water system. This is an increase from the original announcement of up to a \$1,500 rebate for the installation of PFAS treatment.

Not all emerging contaminants are directly associated with man-made chemicals. Increased land development and more intense precipitation trends are increasing nutrient loading in a number of surface water bodies that are sources of drinking water for public water systems. Increased nutrient loading coupled with warming temperatures have caused harmful algal blooms to form in surface water bodies. If the blooms release harmful algal toxins and impact the water at the intake of the public water system, there is a concern that existing drinking water treatment systems may not be adequate to remove the toxins.

### Extent:

There is no universal standard for all types of emerging contaminants; however, environmental service agencies typically measure the presence of chemicals in water sources in parts per billion or trillion— ppb and ppt, respectively. Safe drinking water thresholds for many chemicals are set by either the EPA or NHDES to protect human health; however, new emerging contaminants will require scientific study to determine what level, if any, is safe for human consumption. These contaminant thresholds can change as the health impacts of exposure at different levels are observed over time.

### Impacts:

The impacts of known and emerging contaminants include, but are not limited to:

- Damage to the environment, including impacts to health of aquatic life and animals living in the area.
- The need to find alternative sources of drinking water or installing more robust water treatment equipment to remove the contaminants.
- Reduction of both private and public land value
- Restrictions on recreational use of public water sources (example: In March of 2018, NH Fish and Game notified the public to avoid eating fish caught in rivers near the Seacoast due to contamination).

### Previous Occurrences: History of Known and Emerging Contaminate Events in New Hampshire

Event Date	Event Description	Impacts	Location	Additional Information
Ongoing	Natural Contaminants in Private Wells	Increased risk for adverse health effects	Statewide	Natural contaminants can be present at unsafe concentrations in private wells. There is no requirement for private well owners to test and ensure their water is safe to drink. NHDES has provided a substantial amount of information to the public regarding how to test and treat private wells to ensure drinking water is safe.

Ongoing	Manmade and Emerging Contaminants in groundwater and surface water	Increased risk for adverse health effects if the water is consumed Recreational use restrictions Impact on property values	Statewide	Hundreds of sites throughout New Hampshire have detected unsafe concentrations of chemicals associated with human activities. As these sites are discovered, an environmental site investigation is completed and if necessary, a plan to remediate the contamination is developed and implemented.
---------	--	--	-----------	---

## Hazard: Long-Term Utility Outage

### Definition

A long-term utility outage is defined as a prolonged absence of any type of public utility that is caused by infrastructure failure, cyber-attack, supply depletion, distribution disruption, water source contamination, or a natural, human caused or technological disaster. This hazard is new to the 2018 SHMP update and was identified as a rising area of concern at the initial stakeholder meeting held in April of 2017. For the purpose of this plan, the State will consider a long-term utility outage as one lasting a month or more, or a prolonged outage that causes extreme cascading impacts.

### Location

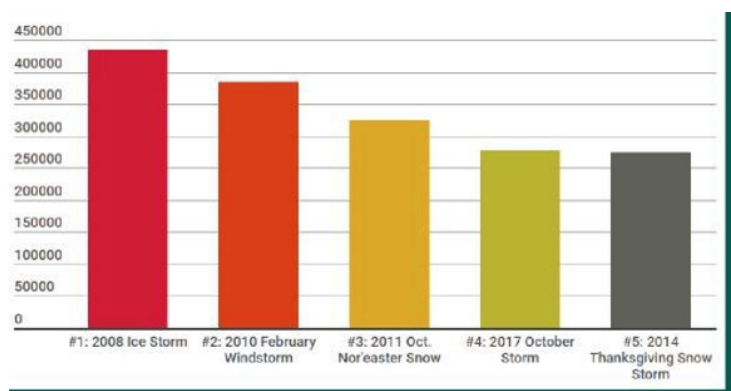

The entire State of New Hampshire is at risk for a long-term utility outage.

### Background and evolving hazard information

Utility outages in the State of New Hampshire are often thought of as being power outages and typically are short lived. That said, the State has experienced and continues to be at risk for long-term utility outages. Types of public utilities that are common in the State can be broken down in four general categories, listed below:

- Power/Electricity: Bio gas, coal, hydroelectric, nuclear, solid waste, wind, geothermal and solar
- Heat/Fuel: Natural gas, propane, heating oil, kerosene, and wood
- Water Supply: Public water districts, private wells, lakes, ponds, rivers, and streams
- Communications: Internet, cable (fiber optic lines), land lines (both fiber optic and copper lines), and satellite

Some of these public utility sectors overlap, but a disruption of any duration to these critical resources causes potential life safety issues to the public. Furthermore, outages of any utility for an extended period of time can lead to cascading effects such as runs on grocery stores, decreased local economy (due to point-of-sale systems and banks being out of commission), disruption of emergency communications, and many more.

**Top 5 power outages in New Hampshire history. Data provided by NH HSEM. Figure courtesy of NHPR.**

Power outages are the most common utility disruptions in New Hampshire, and they often are the result of strong coastal lows, Nor'easters, and severe thunderstorms. These outages are typically short-lived but can persist depending on the severity of the weather event. Historically, the State has seen the top 5 largest power outages in its history within the last decade<sup>1</sup>, the largest and longest of which being the Ice Storm of 2008 that left some New Hampshire residents without power for over two weeks. Three out of five of these severe storms resulted in federally declared disasters for the State.

A meteorological cold wave that began on December 26<sup>th</sup> 2017 led to prolonged, below average temperatures across the State led to an increased demand in heating oil in early January of 2018. Although there was no shortage of heating oil in the State, there were not enough delivery drivers to keep up with the increased demand.<sup>188</sup> A State Call Center was established to prioritize calls for assistance and help relay high level cases directly to fuel companies. Even with the Call Center in place and a waiver signed by the Governor that extended the number of allowable driving hours for delivery personnel, New Hampshire residents faced a wait time in excess of two weeks in some cases. Runs on gas stations with diesel fuel were made, since diesel can supplement heating oil systems during a shortage, and some gas stations in northern New Hampshire ran out of diesel as a result. A warming to more seasonal temperatures in the second week of January brought an end to the cold wave and eventually allowed for the system to catch up on deliveries.

Other potential sources of long-term utility outages include emerging contaminants, which impact drinking water (*see the emerging contaminants section*), and cyber-attacks on any type of utility infrastructure (*see cyber event section*).

Cascading impacts following a long-term utility outage have the potential to be significant and widespread. In the case of electricity, New Hampshire is particularly vulnerable because the electrical grid is tied into the other states within New England; therefore, if one state is impacted heavily, the others will likely be as well. Additionally, the mutual aid resources that are needed to recover will not be available as they will already be at work in their own state. This issue of limited resources has already been seen in severe winter storms that cause more routine large power outages. Other states and Canada will send resources, but they can only stay for a limited time before they must return home. Additionally, it is likely that the supply of other utilities (gas, communications, etc.) will also be impacted because the network for delivery and supply is tightly connected across New England.

Major concerns for cascading impacts include, but are not limited to:

- Transportation impacts and shortage of goods
- Scramble for resources by the public
- Food shortages, including limited to no ability to store perishable foods.
- Inability to transport and deliver fuel.
- Limited or absent primary and secondary communications, including emergency communications.

New Hampshire does not have a state level response plan for a long-term utility outage; however, individual utility companies (gas and electric) are required to have plans in place to respond to long-term outages. The Public Utilities Commission (PUC) assists in managing those plans and provides incident support when necessary.

The State collaborated with FEMA Region I and many other regional and federal stakeholders to create a Regional Power Outage Incident Annex (RI POIA) that will provide a regional framework to maximize response effectiveness and prepare for recovery operations following a large scale, long-term power outage in the Northeast United States. This plan will support the joint Region I, II, and III Northeast Power Outage (NEPOP) Base Plan by providing Region I specific information about response actions during a long-term power outage.

#### ***Extent:***

There is no universal method for measuring the extent of utility outages; however, proxy data can be used to determine the extent or area impacted during an outage. These factors include, but are not limited to:

- Number of customers without power, services, fuel, cable/internet, etc.
- Size of the area experiencing an outage
- How long customers have been without a utility and how long they can expect to be without that resource.
- Whether or not local and State resources were completely expended, requiring federal assistance.
- Extent of cascading impacts
- An event is typically referred to after the fact as the greatest extent experienced, i.e. the greatest number of customers without power throughout the incident.

#### ***Impacts:***

The impacts of utility outages can be either localized or widespread, and include, but are not limited to:

- Residents without power, heat, fuel, and/or communications
- Runs on other resources, such as grocery stores, gas stations, and ATMs
- Disruption of public transportation system, including buses, trains, and airports
- Decrease in local economy as stores are unable to operate without power and close

#### ***Previous Occurrences:***

There are no previous occurrences on record for the State of New Hampshire that meet the threshold of the plan (one month or more); however, notable events where a utility outage has impacted the State and resulted in a significant coordinated response are listed below.

Event Date	Description	Impacts	Location	Additional Information
January 1998	Ice Storm of 1998	Heavy ice accumulation across New England, leading to millions of power outages across the region	Northern, Eastern, and Central New Hampshire <sup>189</sup>	A strong low pressure system and persistent cold air near the surface created prime conditions for ice accretion. Ice accumulations of over observed across the State with observations of up to an inch southern New Hampshire. Extensive. Damage was observed and left roughly 440K customers without power. <sup>190</sup>
December 2008	Ice Storm of 2008	Widespread accumulations of ice across the State causing a long-term power outage	Statewide	This ice storm caused the most extensive power outage in New Hampshire history leaving approximately 433K customers without power. Some customers were not restored for roughly two weeks. The restoration effort cost over \$78M dollars.
February 25 – March 4, 2010	Wind Storm	Anomalous winter storm brought heavy rain, snowfall, and extreme winds, causing a large-scale power outage	Statewide	A strong low-pressure system moved over New England causing widespread high wind gusts that led to the second largest power outage (~338K customers) in New Hampshire history. It took roughly six days to restore power to customers. Seabrook Station saw a 2-meter wind gust of 94 mph.
August 28 – September 1, 2011	Tropical Storm Irene	Strong tropical storm brought high winds, heavy rain, and coastal and inland flooding to the State, leading to extensive power and communications outages	Statewide	The center of Tropical Storm Irene moved just southwest of New Hampshire and brought a prolonged period of strong winds and heavy rain to the State. Many rivers saw 100-year flood events which destroyed historic wooden covered bridges. Roughly 184K NH customers were without power and the restoration effort took approximately 3.5 days to complete.
October 29 – November 4, 2011	Nor'easter – "Snowtober"	An early season winter storm brought large accumulations of wet, heavy snow to the State.	Statewide	Heavy snow led to numerous downed trees and power lines across New Hampshire, causing roughly 300 K power outages, the third largest in the State's

Event Date	Description	Impacts	Location	Additional Information
------------	-------------	---------	----------	------------------------

October 26 – 31, 2012	Tropical Storm Sandy	A strong tropical storm brought widespread strong winds and heavy rain to the State	Statewide	A strong tropical storm caused 190K customers to lose power. It took almost 5 days to restore power and cost the power companies almost \$18M dollars.
January 2014	Fred Fuller	The Fred Fuller oil company was unable to complete fuel deliveries to numerous customers resulting in a shortage during the winter season	Statewide	Fred Fuller, a primary fuel oil supplier for the State, was unable to fulfill automatic deliveries for their customers who had pre-paid for the 2014 winter season. Residents across the State (especially in southern and central New Hampshire) began to run out of fuel and had to be referred to other companies. The company has since dissolved and new legislation was introduced in an effort to prevent recurrence of similar incidents.
October 29 - November 4, 2017	Severe Rain and Wind Storm	A low-pressure system merged with the remnants of Tropical Storm Philippe and moved northeastward, causing high winds and heavy rain	Statewide	Heavy rain and high winds caused flash and riverine flooding, especially in the White Mountains. Preexisting wet soil conditions and wind gusts in excess of 55 mph inland and 80 mph along the coast snapped and uprooted trees and downed power lines, leading to roughly 290K power outages that took a week to restore.
March 2018	Winter Storm	High winds caused communications and connectivity failures	New Hampshire Seacoast	Major communications line that runs across the Piscataqua River was knocked down due to high winds, cutting off 911 communications and cable internet connectivity to portions of Maine and New Hampshire for several hours while the line was restored.

## **Hazard: Mass Casualty Incident**

### **Definition**

Any large number of casualties produced in a relatively short period of time, usually as the result of a single incident such as a military aircraft accident, hurricane, flood, earthquake, or armed assault that exceeds local logistic support capabilities.<sup>1</sup>

### **Location**

The entire State of New Hampshire is vulnerable to a Mass Casualty Incident (MCI).

### **Background and Evolving Hazard Information**

According to FEMA's Fire/Emergency Medical Services Department Operational Considerations and Guide for Active Shooter and Mass Casualty Incidents, more than 250 people have been killed in the United States during what has been classified as Active Shooter and Mass Casualty Incidents (AS/MCIs) since the Columbine High School shooting in 1999 until 2013 when the document was published. Recent high profile events that have garnered national attention have included the Inland Regional Center in San Bernardino, CA (2015)<sup>i</sup> and Stoneman Douglas High School in Parkland, FL (2018). These type of events may take place anywhere in the State of New Hampshire impacting fire and police departments, regardless of their size or capacity.<sup>2</sup>

The State has experienced its share of Mass Casualty Incidents, most recently the assumed contaminate release at Exeter Hospital in August 2017 resulting in numerous staff members becoming dizzy and nauseous. Multiple neighboring community ambulances responded and transferred employees to other area hospitals while investigators tested the air for the cause. Although a cause was never identified, parts of the hospital were closed down and cleaned in an attempt to mitigate further illness.<sup>3</sup>

In February 2014, firefighters from across southern New Hampshire responded to a Peterborough manufacturing company, New Hampshire Ball Bearings Inc., following an industrial explosion leaving two people critically injured and four with serious injuries.<sup>4</sup> Concord High School experienced an active shooter in December 1985 when a former student entered the school with a shotgun shortly after eight in the morning. Two students were held hostage when police arrived on scene. The incident ended with the fatality of the gunman by justified police force.<sup>5</sup>

Icy conditions on the F.E. Everett Turnpike resulted in several multiple vehicle crashes and a mass casualty incident in Nashua on December 25, 2021. Nashua Fire requested additional ambulances from surrounding towns, a mass casualty incident was declared at the two Nashua hospitals. (Source: <https://patch.com/new-hampshire/nashua/hundreds-accidents-close-new-hampshire-roads-highways>)

On March 22, 2011, a tour bus transporting 25 Korean tourists coming from Quebec enroute to

Boston slid off Interstate 93 and rolled over. The accident was treated as a mass casualty incident bringing ambulances from six communities, as far away as Woodsville, Lancaster, Twin Mountain, and St. Johnsbury, VT. Among the fire and police departments responding to the accident, in addition to Littleton, were Franconia, Bethlehem, Lancaster, and Haverhill, as well as Vermont State Police. (Source: <https://www.ems1.com/mass-casualty-incidents-mci/articles/2-brothers-translated-for-nh-responders-at-bus-crash-fNebIDNvYO86SDKF/>)

## ***Hazard: Radiological***

### ***Definition***

Radiological hazards can range from relatively localized incidents involving small amounts of radioactive materials to large-scale catastrophic events. Smaller sources of radiation hazards may be found in medical facilities, industrial, and laboratory facilities where radioactive materials and/or radiation producing devices are used. Some radiation is produced naturally from the natural decay of radioactive isotopes in soils and underlying strata.

### ***Location***

All facilities throughout the State of New Hampshire are vulnerable to a radiological accident.

### ***Background and Evolving Hazard Information***

The public may be exposed to radiation via several different scenarios:

#### **Naturally Occurring Radiation**

The granite and soil of New Hampshire contains small amounts of uranium. As this uranium decays, it forms radon gas, which is a colorless and odorless inhalation hazard. The White Mountain region in the northcentral part of the state has the highest probabilities for uranium and radon, and groundwater throughout the state has over a 50% probability to having elevated radon levels.

Radon, in air and water, can be tested and mitigated. The New Hampshire Department of Health and Human Services has a radon section, offering free test kits and more information.

#### **Radioactive Materials**

Radioactive materials are employed in the State of New Hampshire for medical and industrial uses. New Hampshire is a U.S. Nuclear Regulatory Commission Agreement State, making the New Hampshire Department of Health and Human Services Radioactive Materials Program responsible for all regulation of the uses of radioactive materials in the state, with the exceptions of federal facilities and the Seabrook Station nuclear power plant. Licensees are subject to the requirements contained in the New Hampshire Rules for Control of Radiation (Chapter 4000) and are inspected for compliance with these rules.

Radioactive materials are closely controlled in New Hampshire and in the United States. An incident involving a traffic accident, fire, misuse, loss, or theft of radioactive materials poses a potential risk to the public and would be quickly reported to state and federal officials.

### ***Terrorism***

Terrorism involving nuclear or radiological materials are possible threats to the United States.

A Radiological Dispersion Device (RDD), or “dirty bomb”, is a mix of explosives with radioactive

materials, meant to disperse those materials. No such device has been exploded as a terrorist act in the United States or the world. With the rural nature of New Hampshire, and proximity to symbolic targets on the eastern seaboard, the possibility exists for an organization to headquarter and build a device in the state.

An Improvised Nuclear Device is a device designed to create a nuclear detonation. It is unlikely a terrorist would target New Hampshire. In the event of a nuclear explosion in the vicinity of New York City or Boston, depending on winds, a fallout cloud would take 1-2 hours to reach New Hampshire.

### ***Nuclear Power***

Seabrook Station Nuclear Power Plant utilizes the largest amount of radioactive material in New Hampshire to generate electricity. Seabrook Station is closely regulated by the United States Nuclear Regulatory Commission. The Radiological Emergency Preparedness Program requires plans, procedures, equipment, and training is sufficient to protect the health and safety of the public in the unlikely event of an accident. This program is managed in New Hampshire by the Division of Homeland Security and Emergency Management and evaluated by the Federal Emergency Management Agency.

There are two planning zones specific to the Seabrook Station Nuclear Power Plant. The Emergency Planning Zone is the 10-mile radius around the plant, where capabilities exist to quickly notify and evacuate the public in the case of an accident, to minimize or prevent exposure to radiation. The Ingestion Pathway Zone is a 50-mile radius from the plant, where protective actions to protect food, water, and environmental resources would be implemented.

These zones include the following 96 communities:

Plume & Ingestion	Ingestion Only			
Brentwood	Allenstown	Derry	Litchfield	Pembroke
East Kingston	Alton	Dover	Londonderry	Pittsfield
Exeter	Amherst	Dunbarton	Loudon	Plaistow
Greenland	Atkinson	Durham	Lyndeborough	Raymond
Hampton	Auburn	Epping	Madbury	Rochester
Hampton Falls	Barrington	Epsom	Manchester	Rollinsford
Kensington	Barnstead	Farmington	Mason	Salem
Kingston	Bedford	Francestown	Merrimack	Sandown
New Castle	Belmont	Fremont	Middleton	Somersworth
Newfields	Boscawen	Gilford	Milford	Strafford
Newton	Bow	Gilmanton	Milton	Wakefield
North Hampton	Brookfield	Goffstown	Mont Vernon	Weare
Portsmouth	Brookline	Greenfield	Nashua	Webster
Rye	Candia	Greenville	New Boston	Wilton
Seabrook	Canterbury	Hampstead	New Durham	Windham
South Hampton	Chester	Henniker	Newington	Wolfeboro
Stratham	Chichester	Hollis	Newmarket	
<b>Host Sites</b>	Concord	Hooksett	Northfield	
Rochester Middle School	Danville	Hopkinton	Northwood	
Dover Middle School	Deerfield	Hudson	Nottingham	
Manchester Memorial High School	Deering	Lee	Pelham	

Seabrook Station stores spent fuel from its reactor onsite in shielded casks in a protected Independent Spent Fuel Storage Installation (ISFSI) complex.

The Portsmouth Naval Shipyard conducts maintenance and refueling of nuclear submarines at its facilities on the Piscataqua River. The shipyard services up to four submarines at a time. All spent fuel removed from submarines is securely transported to the US Department of Energy's Idaho National Engineering and Environmental Laboratory.

#### ***Extent, Impacts, and Previous Occurrences***

No deaths or serious injuries have ever been attributed to a radiological incident or event in the State of New Hampshire.

## **Hazard: Transport Accident**

### **Definition**

A transport accident is any accident that occurs during transportation. Specifically, for this Plan, it refers to an aviation, rail, shipping, tractor trailer, or vehicle accident.

### **Location**

The entire State of New Hampshire is vulnerable to a transport accident.

### **Background and Evolving Hazard Information**

Similar to other states throughout the Nation, New Hampshire suffers from aging infrastructure. The American Society of Civil Engineers released its [2017 report card](#) giving the State with a C - rating overall.<sup>i</sup> The report further identifies that the increase in annual number of vehicle miles traveled has led to a more rapid deterioration of roads and bridges. Based on the graphic below, the overall VMT per year continues to steadily increase.<sup>ii</sup>

#### **Overall VMT by Year**

New Hampshire has a total of twenty-five airports currently functioning throughout the state. Three are categorized as major airports including: Portsmouth International Airport at Pease (PSM), Manchester-Boston Regional Airport (MHT), and Lebanon Municipal Airport (LEB), while the remaining twenty-two airports provide regional and/or limited service.

There are 459 miles of active railroad in New Hampshire. The State is the largest railroad owner with over 200 miles of active line, purchased to preserve freight service to industry, or to promote tourism and recreational usage.

Recreational and commercial boat travel occurs along the New Hampshire Coastline and harbors as well as throughout the State's numerous lakes and rivers. The Division of Ports and Harbors (DPH) assists in the establishment of accommodations for the boat traveler, the area boat owner, the pleasure fishermen and others who pass up and down the New Hampshire coastline or in its tributaries, particularly the Piscataqua River and Portsmouth Harbor.<sup>2</sup> According to the New Hampshire Coast Guard there have been a total of 22 shipping incidents in New Hampshire waters since 2008. These incidents were comprised of 7 allisions, 4 collisions, and 11 groundings.

Of the roads in the State, 225 miles (362 km) are Interstate highways (35 miles (56 km) of which are also on the New Hampshire Turnpike System); 52 miles (84 km) are non-interstate turnpike highways; and 505 miles (813 km) are non-interstate and non-turnpike highways.

Based upon current transportation capabilities the State remains vulnerable to a potential transport accident. According to the New Hampshire Information and Analysis Center over the past twenty years New Hampshire has experienced an annual average of 117 fatal crashes (127 victims) due to vehicular transportation accidents.

The Transportation Management Center (TMC) currently communicates potentially hazardous road conditions, accidents, and/or roadwork information on electronic signage throughout the State's highway network. This capability helps promote awareness of potential variables that may cause a transportation accident on the roadway.

<sup>ii</sup> [2021-nhdot-fact-book.pdf](#), page 40

## **Hazard: Terrorism/Targeted Violence**

### **Definition**

#### **Terrorism:**

Premeditated, politically motivated violence perpetrated against noncombatant targets by subnational groups or clandestine agents.<sup>1</sup>

According to the Federal Bureau of Investigation (FBI), the term terrorism can be subcategorized into two categories:

- International Terrorism: Perpetrated by individuals and/or groups inspired by or associated with designated foreign terrorist organizations or nations (state-sponsored).
- Domestic Terrorism (DT): Perpetrated by individuals and/or groups inspired by or associated with primarily U.S.-based movements that espouse extremist ideologies of a political, religious, social, racial, or environmental nature.<sup>2</sup>

#### **Targeted Violence:**

The U.S. Department of Homeland Security, Office of Intelligence and Analysis defines it as, “Any premeditated act of violence directed at a specific individual, group, or location, regardless of motivation, that violates the criminal laws of the United States or of any State or subdivision of the United States.” (NTER - <https://www.dhs.gov/nter#targeted>)

### **Location**

The entire State of New Hampshire is vulnerable to both terrorist attacks and acts of targeted violence.

### **Background and Evolving Hazard Information**

Many factors have contributed to the evolution of the terrorism threat on both the international and domestic fronts, such as:

- **Lone offenders**: Terrorist threats have evolved from large-group conspiracies toward lone-offender attacks. These individuals often radicalize online and mobilize to violence quickly. Without a clear group affiliation or guidance, lone offenders are challenging to identify, investigate, and disrupt. The FBI relies on partnerships and tips from the public to identify and thwart these attacks.
- **The Internet and social media**: International and domestic violent extremists have developed an extensive presence on the Internet through messaging platforms and online images, videos, and publications. These facilitate the groups’ ability to radicalize and recruit individuals who are receptive to extremist messaging. Social media has also allowed both international and domestic terrorists to gain unprecedented, virtual access

to people living in the United States, in an effort to facilitate homeland attacks. The Islamic State of Iraq and ash-Sham (ISIS) encourages sympathizers to carry out simple attacks wherever they are located—or to travel to ISIS-held territory in Iraq and Syria and join its ranks as foreign fighters. This message has resonated with supporters in the United States and abroad.

The different types of attacks that may occur throughout the world and New Hampshire include, but are not limited to:

- armed and unarmed assaults
- communicated threats
- money laundering
- narco-terrorism
- fraud, espionage
- assassinations
- kidnappings
- hijackings
- bomb threats and bombings
- cyberattacks (computer-based)
- vehicle ramming's
- the potential use of chemical, biological, nuclear, radiological and explosives (CBRNE) weapons of mass destruction (WMDs)

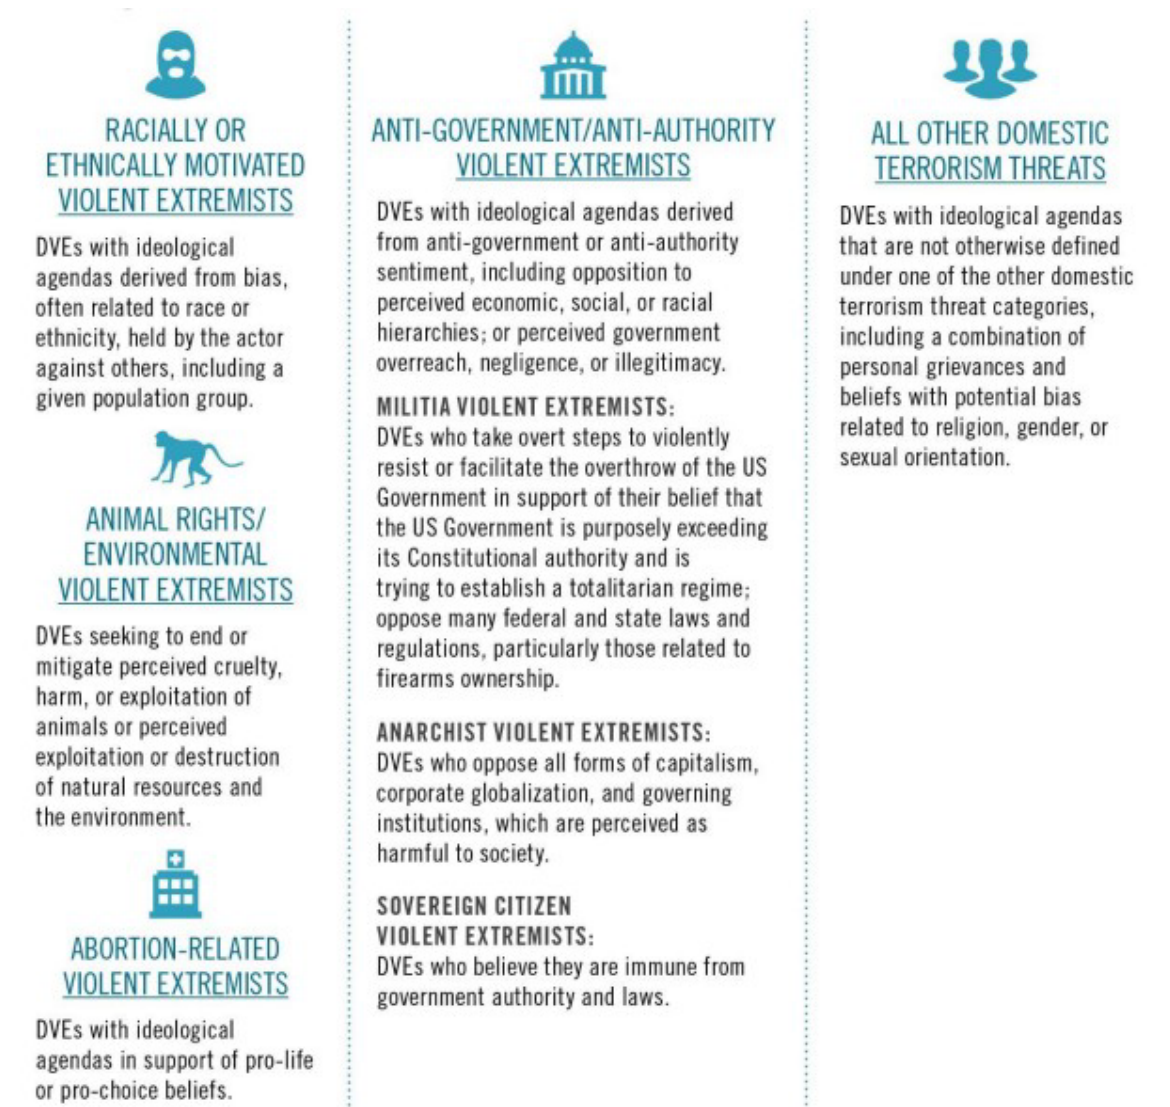

High-risk targets include, but are not limited to:

- government facilities
- commercial airports
- high-profile landmarks
- water and food supplies
- corporate centers
- educational facilities
- large cities
- large public gatherings
- utilities

Furthermore, terror groups have recognized the capability of spreading fear by sending explosives or chemical and biological agents through the mail.

Since September 11, 2001, the overriding concern has been focused on the threat of a terrorist attack carried out by international groups who are able to capitalize on perceived weaknesses in the United States. This terror threat is compounded by the threat of Homegrown Violent Extremists (HVE) as well as the threat of DT groups and lone wolf offenders.

The graphic below provides additional information on each of the five DT threat categories:

2021-01619-NCTC-ID

An HVE is a person or group of people who are inspired by a global terrorist organization that prepares, plans, and executes their attacks without direct support or guidance from the terrorist organization. Lone wolf offenders are not directed or controlled by any specific terror group, but are often inspired by DT group beliefs, grievances, and rhetoric through propaganda videos and articles.

The threat of a terror attack by HVEs or lone wolf offenders is of significant concern based on their lack of connection to a larger conspiracy, autonomy, and low profile, all of which limit the ability of law enforcement to detect and disrupt such plots. Furthermore, attacks of this nature present equal risk to every state, city, town, and municipality in the U.S., as the symbolic targeting of key infrastructure and population locations is often focused on the nearest available target rather than the national visibility of that target. It is important to recognize, offenders rarely

carried out attacks that were spontaneous. According to the United States Secret Service National Threat Assessment Center, in a 2019 publication, more than 65% of offenders exhibited behaviors that were concerning to other people

### Extent

Between 2018 and 2020, according to data from the Global Terrorism Database<sup>i</sup>, there were 251 incidents that were successfully or unsuccessfully carried out across the United States.

In 2019, the FBI has utilized five categories to address the DT threat landscape<sup>ii</sup>:

- Racially or Ethnically Motivated Violent Extremism (RMVE)
- Anti-Government or Anti-Authority Violent Extremism
- Animal Rights/Environmental Violent Extremism
- Abortion-Related Violent Extremism
- All Other DT Threats

The cyber threat in New Hampshire and the United States is of significant concern. Terrorists are increasingly using the cyber domain to conduct attacks and complete other activities (i.e., fund raising through fraud and phishing, spreading terrorist doctrines, organizing people and resources, etc.). With the growing dependence on computers and internet-based critical programs comes the opportunity for cyber criminals to do harm and exploit weaknesses within information technology systems.

Individuals responsible for school shootings can fall into the category of DT. In 2018, the NH School Safety Preparedness Task Force issued a report which included 59 recommendations that address a variety of school related topics dealing with School Safety.

The New Hampshire Department of Safety, Division of Homeland Security and Emergency Management promotes and implements the School Readiness Program. The Program has staff that assist public and nonpublic schools with the following services, at no cost:

- Providing technical assistance in the development, implementation, and review of school emergency operations plans;
- Conducting voluntary physical security assessments; and
- Facilitating trainings and exercises that focus on critical school-based incidents.

NH RSA 189:64 requires every public, chartered public, and nonpublic school to conduct at least 4, "...all-hazard response drills of which at least one shall test emergency response to an armed assailant. The armed assailant drill may be discussion based. The types of all-hazard drills and exercises and the manner and time in which these activities take place shall be determined by the school in collaboration with local public safety, emergency management, and public health officials." ([GENCOURT CITATION](#)). Additionally, this law requires that schools develop a school emergency operations plan which requires annexes that relate to terrorism and targeted violence.

### ***Impacts***

Terrorists historically have taken advantage of civil unrest. Title 18 U.S. Code, Subsection 232 describes civil disorder as "any public disturbance involving acts of violence by assemblages of three or more persons causing immediate danger, damage, or injury to the property or person of another individual." New Hampshire is not immune to public disorder and has experienced incidents in the past at Hampton Beach, the annual Laconia Motorcycle Rally, the Seabrook Station Nuclear Power Plant and university and college campuses across the State. Civil disorder is recognized as a societal hazard in New Hampshire because of the associated potential for loss of life, injury, property damage, and economic disruption.

While New Hampshire has been fortunate to escape a major terrorist attack, it has not been immune from terrorist incidents or violent crimes. In 1972, a pipe bomb was detonated and destroyed portions of the main tower at the Manchester Airport. In 1998, a pipe bomb was partially detonated within the Concord City Library causing a fire. A short time later, a second pipe bomb was found on the steps of the New Hampshire State Library. This incident followed an anonymous letter sent to the Governor's office which indicated that bombs would be detonated within the City of Concord. Since that time, there have been numerous bomb threats throughout New Hampshire requiring the response of emergency officials.

### Who is a Refugees?

“A refugee is someone who has been forced to flee his or her country because of persecution, war, or violence. A refugee has a well-founded fear of persecution for reasons of race, religion, nationality, political opinion, or membership in a particular social group. Most likely, they cannot return home or are afraid to do so. War and ethnic, tribal, and religious violence are leading causes of refugees fleeing their countries.”<sup>4</sup> – USA for UNHCR (United Nations High Commissioner for Refugees)

According to the New Hampshire Refugee Program (NHRP), which operates under the New Hampshire Office of Minority Health and Refugee Affairs, their program assisted 3,029 refugees resettle into NH between 2012 and 2021.<sup>5</sup>

Since the early-1980s more than 7,500 refugees have made New Hampshire their home. Refugees have greatly contributed to our state and local communities. Through their hard work, they have strengthened our economy and their presence has enriched the cultural diversity of New Hampshire. The primary goal of the Refugee Program is to assist refugees in their quest for economic self-sufficiency and successful integration.

Population 18 to 64 years	11,644	644	468	519	349	1,061	3,117	1,113	2,571	1,222	580
With an independent living difficulty	55,424	2,783	2,612	3,323	1,692	5,005	15,432	6,645	10,028	5,340	2,564
Population 18 to 64 years	30,873	1,356	1,481	1,724	915	2,867	8,593	3,705	5,560	3,024	1,648

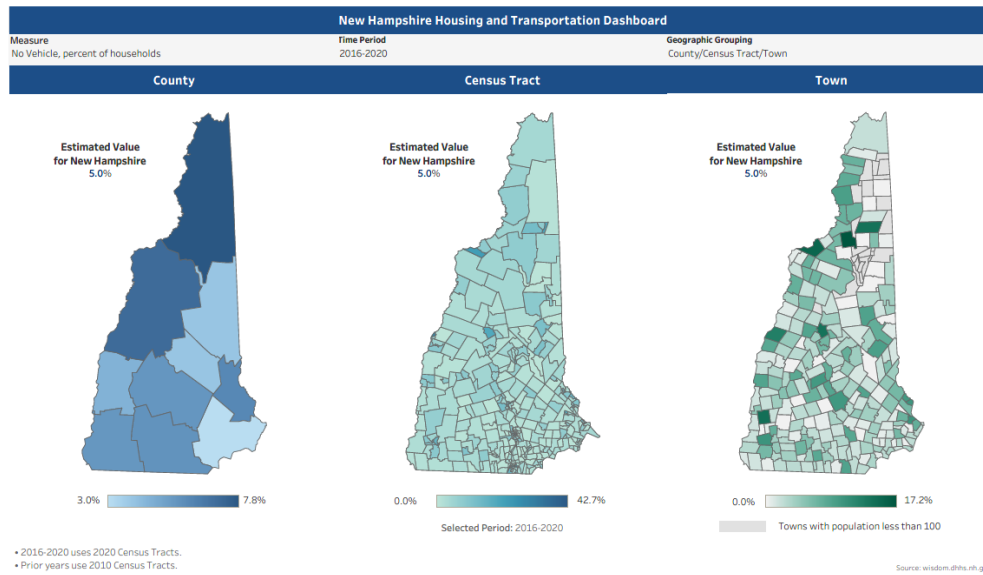

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value.

**Foot Notes**

(1) October 1, 2021 enrollment plus Early Exits that left before October 1st.

(2) These are students that exited high school during the 21-22 school year but subsequently received a high school equivalency certificate from the State of NH as a result of testing at one of the NH high school equivalency testing centers. Their high school transcripts have been counted on this high school report. Any student who did not grant access to their transcripts or who received a high school equivalency certificate from another state could not be verified and therefore is not counted.

(3) These are early exit students who have not earned a high school equivalency certificate but have enrolled in at least one college course. National Student Clearinghouse data, which contains enrollment verification for 96% of US two-year colleges, is used to verify enrollment. Students who have earned a high school equivalency certificate and have entered college without graduating are only counted once under high school equivalency. They are not double counted under both categories.

(4) Dropouts are early exit, non-graduates that have not been identified as either receiving a high school equivalency certificate or enrolling in college. These are students reported by their schools as dropouts. Students under the age of 18 are not counted. Previously, repeat dropouts were not reported again. As of 2019-2020, the guidance has changed to include repeat dropouts in the count and therefore they are included in this count.

(5) The total number of students under the age of 18 and reported as a W9 (truant).

Definition of an early exit: For 2021-2022, any student who completed the 2020-2021 school year but did not return to school in September 2021, or who left high school during the 2021-2022 school year and did not return to high school students who were home schooled, suspended, temporarily expelled, truants, incarcerated; or who completed a high school program (diploma or certificate), transferred to another high school, or died.

Definition of a dropout: For 2021-2022, any early exit student who has not received a high school equivalency certificate or been enrolled in college or reported as truant (W9) prior to the compilation of this report.

Annual Early Exit Rate = Early Exit count, divided by the October 1, 2021 enrollment plus Early Exits that left before October 1st.

Annual Dropout Rate = Dropouts divided by the October 1, 2021 enrollment plus students that dropped out before October 1st.

Cumulative Rates =  $1 - (1 - \text{annual rate})^4$ . This formula applies the annual rate to a progressively declining base population. The cumulative rate represents the percentage of current students who will early exit or drop out before reaching not applicable to Charter Schools due to high migration.

(6) The total number of early exit, non-graduates has been used to calculate annual and cumulative percentages. These are comparable to prior years "dropout" rates. The rate formulas are explained above.

(7) The annual and cumulative percentages have been calculated using only the "Dropped Out" sub-category count. The rate formulas are explained above.

In the past, different enrollment adjustments were used for high migration Charter schools. Starting with 2014 - 2015 school year, October 1st enrollment is used for all schools.

**Data Source**

Dropout data set is calculated using the EOY and BOY submissions.

Next Scheduled Update: September 2023

## Age 25+ No Highschool Diploma

## 4-Year College Degree or Higher

It is notable that immigrants in New Hampshire are more likely to be college educated than native state counterparts. Two-fifths (41 percent) of adult immigrants have a college degree or more education in 2018, while fewer than one-fifth (17 percent) had less than a high school diploma.

Education Level	Share (%) of All Immigrants	Share (%) of All Natives
College degree or more	41	37
Some college	21	29
High school diploma only	21	28
Less than a high school diploma	17	6

All ACS data are estimates. Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. (X) indicates data are not applicable.

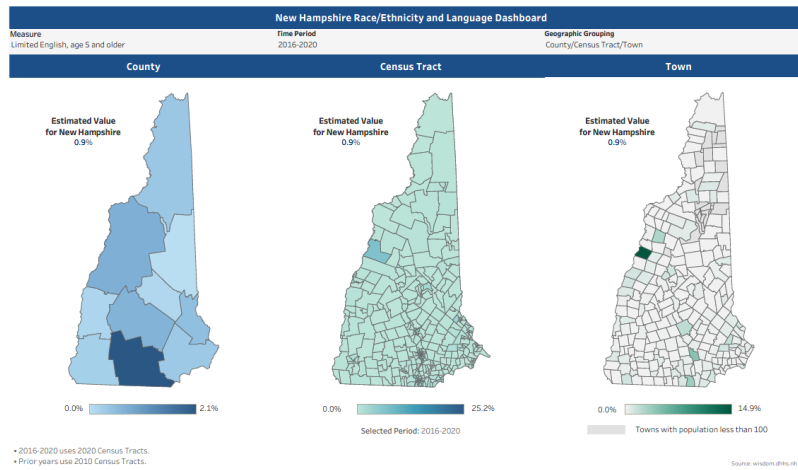

New Hampshire communities with the largest number of citizens age 18 and over who speak a language other than English are included.

NH SHMP Process

2023 SHMP Implementation and Maintenance Cycle

2023-2028 SHMP Large One-Time Deliverables

## SHMP Maintenance & Implementation Recurring Deliverables

### Annually

- SHMP Review and Evaluation, including SHMPC and all plan contributors
- FEMA Consultation Meeting
- Update Capabilities Table to integrate new programs, policies, initiatives, and funding at the local, State and Federal level
- Summary of progress addressing equity for vulnerable populations
- Summary of progress engaging both new and existing SMEs
- Summary of Community Engagement Strategy progress, activities, feedback, and outcomes
- Mitigation Strategy Meeting with all contributors to review strategies and progress of actions/projects
- Meetings with Port Security – semi-annual?

## SHMP Maintenance & Implementation Recurring Deliverables

### Monthly

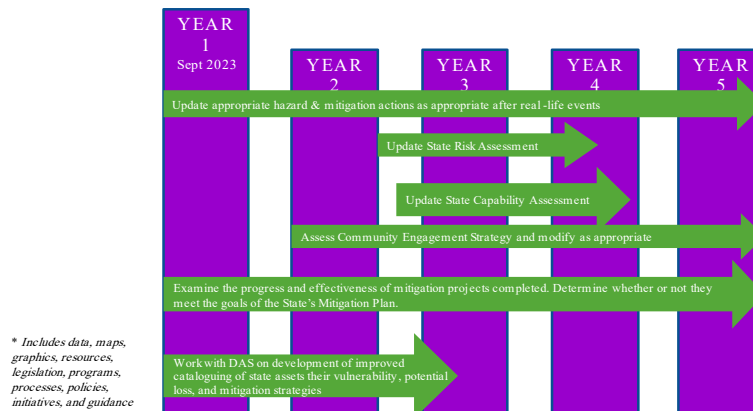

- FEMA Region 1 Monthly Mitigation Planning Meetings
- Determine SHMPC meeting frequency change? Year4/5 Switch to monthly or bi-weekly?

### Quarterly

- Submit Mitigation Grant Reports to FEMA
- SHMPC Meetings
- Mitigation meetings with RPCs
- Mitigation meetings with local EM
- Summary of the development of local mitigation plans

## Appendix H: National Risk Index Risk Comparison Report

Use this report to determine how risk factors in selected communities compare to each other. Click a community name in any table below to open an individual risk profile report for that community and review its risk factors in more detail.

While reviewing this report, keep in mind that low risk is driven by lower loss due to natural hazards, lower social vulnerability, and higher community resilience.

For more information about the National Risk Index, its data, and how to interpret the information it provides, please review the **About the National Risk Index** and **How to Take Action** sections at the end of this report or, visit the National Risk Index website at [hazards.fema.gov/nri/learn-more](https://hazards.fema.gov/nri/learn-more) to access supporting documentation and links.

## Risk Index

Rank	Community	State	EAL Value	Social Vulnerability	Community Resilience	CRF	Risk Value	Score
1	<a href="#">Hillsborough County</a>	NH	\$39,575,201	Relatively Low	Relatively High	0.96	\$37,905,330	88.58

### Expected Annual Loss for Hazard Types

Expected Annual Loss scores for hazard types are calculated using data for only a single hazard type and reflect a community's relative expected annual loss for only that hazard type.

### **About the National Risk Index**

The National Risk Index is a dataset and online tool to help illustrate the United States communities most at risk for 18 natural hazards: Avalanche, Coastal Flooding, Cold Wave, Drought, Earthquake, Hail, Heat Wave, Hurricane, Ice Storm, Landslide, Lightning, Riverine Flooding, Strong Wind, Tornado, Tsunami, Volcanic Activity, Wildfire, and Winter Weather.

The National Risk Index leverages available source data for Expected Annual Loss due to these 18 hazard types, Social Vulnerability, and Community Resilience to develop a baseline relative risk measurement for each United States county and Census tract. These measurements are calculated using average past conditions, but they cannot be used to predict future outcomes for a community. The National Risk Index is intended to fill gaps in available data and analyses to better inform federal, state, local, tribal, and territorial decision makers as they develop risk reduction strategies.

Explore the National Risk Index Map at [hazards.fema.gov/nri/map](https://hazards.fema.gov/nri/map).

Visit the National Risk Index website at [hazards.fema.gov/nri/learn-more](https://hazards.fema.gov/nri/learn-more) to access supporting documentation and links.

### **Calculating the Risk Index**

Risk Index scores are calculated using an equation that combines scores for Expected Annual Loss due to natural hazards, Social Vulnerability and Community Resilience:

$$\text{Risk Index} = \text{Expected Annual Loss} \times \text{Social Vulnerability} \div \text{Community Resilience}$$

Risk Index scores are presented as a composite score for all 18 hazard types, as well as individual scores for each hazard type.

For more information, visit [hazards.fema.gov/nri/determining-risk](https://hazards.fema.gov/nri/determining-risk).

### **Calculating Expected Annual Loss**

Expected Annual Loss scores are calculated using an equation that combines values for exposure, annualized frequency, and historic loss ratios for 18 hazard types:

$$\text{Expected Annual Loss} = \text{Exposure} \times \text{Annualized Frequency} \times \text{Historic Loss Ratio}$$

Expected Annual Loss scores are presented as a composite score for all 18 hazard types, as well as individual scores for each hazard type.

For more information, visit [hazards.fema.gov/nri/expected-annual-loss](https://hazards.fema.gov/nri/expected-annual-loss).

### ***Calculating Social Vulnerability***

Social Vulnerability is measured using the Social Vulnerability Index (SVI) published by the Centers for Disease Control and Prevention (CDC).

For more information, visit [hazards.fema.gov/nri/social-vulnerability](https://hazards.fema.gov/nri/social-vulnerability).

### ***Calculating Community Resilience***

Community Resilience is measured using the Baseline Resilience Indicators for Communities (HVRI BRIC) published by the University of South Carolina's Hazards and Vulnerability Research Institute (HVRI).

For more information, visit [hazards.fema.gov/nri/community-resilience](https://hazards.fema.gov/nri/community-resilience).

### ***How to Take Action***

There are many ways to reduce natural hazard risk through mitigation. Communities with high National Risk Index scores can take action to reduce risk by decreasing Expected Annual Loss due to natural hazards, decreasing Social Vulnerability, and increasing Community Resilience.

For information about how to take action and reduce your risk, visit [hazards.fema.gov/nri/take-action](https://hazards.fema.gov/nri/take-action).

### ***Disclaimer***

The National Risk Index (the Risk Index or the Index) and its associated data are meant for planning purposes only. This tool was created for broad nationwide comparisons and is not a substitute for localized risk assessment analysis. Nationwide datasets used as inputs for the National Risk Index are, in many cases, not as accurate as available local data. Users with access to local data for each National Risk Index risk factor should consider substituting the Risk Index data with local data to recalculate a more accurate risk index. If you decide to download the National Risk Index data and substitute it with local data, you assume responsibility for the accuracy of the data and any resulting data index. Please visit the [Contact Us](#) page if you would like to discuss this process further.

The methodology used by the National Risk Index has been reviewed by subject matter experts in the fields of natural hazard risk research, risk analysis, mitigation planning, and emergency management. The processing methods used to create the National Risk Index have produced results similar to those from other natural hazard risk analyses conducted on a smaller scale. The breadth and combination of geographic information systems (GIS) and data processing techniques leveraged by the National Risk Index enable it to incorporate multiple hazard types and risk factors, manage its nationwide scope, and capture what might have been missed using other methods.

The National Risk Index does not consider the intricate economic and physical interdependencies that exist across geographic regions. Keep in mind that hazard impacts in surrounding counties or Census tracts can cause indirect losses in your community regardless of your community's risk profile.

Nationwide data available for some risk factors are rudimentary at this time. The National Risk Index will be continuously updated as new data become available and improved methodologies are identified.

The National Risk Index Contact Us page is available at [hazards.fema.gov/nri/contact-us](https://hazards.fema.gov/nri/contact-us).

## Appendix I: Previous Development (since 2018 Plan)

Previous Development (since 2018 Plan)					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Groton (Grafton)	Culvert Mitigation	HMGP 4355	Mitigation of culverts on road that serves as a primary evacuation route. Bridge on road was identified by LHMP as an Emergency Response Facility infrastructure.	Roadway experienced washout and damage during Tropical Storm Irene, DR 4026.	Repairing and mitigating the roadway's various infrastructures was identified as a LHMP Mitigation action for the past 3 LHMPs.
Marlow (Cheshire)	Culvert Mitigation	HMGP 4316	Address inland flooding risks within the community and the impacts on roadways, infrastructure, and evacuation routes.	N/A	Repairing and mitigating the roadway's various infrastructures was identified as a LHMP Mitigation action for the past 2 LHMPs.
Grafton (Grafton)	Culvert Mitigation	HMGP 4371	Mitigation of culverts on road that serves as a secondary evacuation route. Bridge on road was identified by LHMP as an Emergency Response Facility infrastructure.	Heavy rain from Tropical Storm Irene caused washout and minor damage. Heavy rain in October 2017 caused washout and damage of roadway, DR 4355.	Repairing and mitigating the roadway's various infrastructures was identified as a LHMP Mitigation action for the past 2 LHMPs. Five separate actions addressed various infrastructure on this particular road.

Previous Development (since 2018 Plan)					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Barrington (Strafford)	Culvert Mitigation (Project Scoping)	BRIC 2020	Address inland flooding risks within the community and the impacts on roadways, infrastructure, and evacuation routes.	Heavy rain in May 2006 caused washout and damage of roadway, DR 1643.	N/A
Canaan (Grafton)	Dam Mitigation	HHPD 2019	Mitigation of aging infrastructure, potential dam failure, and flooding. Identified by LHMP as an Emergency Response Facility infrastructure.	Constructed in 1918, reconstructed in 1852.	Mitigation actions involving exercises to evacuate the area impacted by the dam for preparation of potential dam failure.
Nottingham (Rockingham)	Dam Mitigation	HHPD 2019	Mitigation of aging infrastructure, potential dam failure, and flooding. Identified by LHMP as Critical infrastructure.	Constructed in 1840, no indication of reconstruction. May 2006 caused dam breaching throughout the town, DR 1643	N/A
Swansey (Cheshire)	Dam Mitigation	HHPD 2019	Mitigation of aging infrastructure, potential dam failure, and flooding.	N/A	Repairing or removing the dam and pond was identified as a Mitigation action in the past 2 LHMPs

Previous Development (since 2018 Plan)					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Nottingham (Rockingham)	Dam Mitigation	HHPD 2020	Mitigation of aging infrastructure, potential dam failure, and flooding. Identified by LHMP as Critical infrastructure.	May 2006 caused dam breaching throughout the town, DR 1643.	N/A
Goffstown (Hillsborough)	Dam Mitigation	HHPD 2020	Mitigation of aging infrastructure, potential dam failure. Identified by LHMP as an Emergency Response Facility infrastructure.	Constructed in late 1930s. Letter of Deficiency sent October of 2019.	Repairing the dam was identified as a Mitigation action in the past 2 LHMPs

Potential Future Development					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Barrington (Strafford)	Culvert Mitigation	HMGP	Mitigation of culverts on the road and raise the roadway by 3 feet.	N/A	Repairing and mitigating the roadway's various infrastructures was identified as a LHMP Mitigation action for the past and current LHMP.

Potential Future Development					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Bethlehem (Grafton)	Culvert Mitigation	HMGP	Mitigation of culverts on road that serves as a secondary evacuation route. Bridge on road was identified by LHMP as an Emergency Response Facility infrastructure.	LHMP identifies road as a landslide risk.	Repairing and mitigating the roadway's various infrastructures was identified as a LHMP Mitigation action for the past and current LHMP. Two separate mitigation actions in LHMP address this road and hazard risks to the roadway.
Bethlehem (Grafton)	Culvert Mitigation (Project Scoping)	BRIC	Engineering for the mitigation of road to prevent washout and build up road.	Road experienced washout during July 2017 heavy rain, DR-4329.	Repair and mitigation of road was identified in the LHMP as a Mitigation action.
Claremont (Sullivan)	Culvert Mitigation (Project Scoping)	BRIC	Mitigation of culverts on road that serves as a primary evacuation route. Bridge on road was identified by LHMP as an Emergency Response Facility infrastructure.	Road experiences seasonal flooding over roadway. It has been impacted by additional heavy rain events, DR-4139.	Mitigation of road infrastructure was identified in the LHMP as a Mitigation action.

Potential Future Development					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Conway (Carroll)	Culvert Mitigation	HMGP	Mitigation of culverts on road that serves as a secondary evacuation route. Bridge on road was identified by LHMP as an Emergency Response Facility infrastructure.	Inland flooding in 1963 impacted roadway. Tropical storm Irene cause washout and damage, DR-4026. Heavy rain in July 2017 flooded road, DR-4329. Inland flooding causes road closure approximately every 3 years.	Mitigation of the roadway's infrastructure has been identified as a LHMP mitigation action for the past two LHMPs.
Effingham (Carroll)	Culvert Mitigation	HMGP	Mitigation of aging infrastructure, potential dam failure, and flooding.	Road experiences seasonal flooding most years with damage and washout.	Mitigation of the roadway's infrastructure has been identified as a LHMP mitigation action for the past two LHMPs.
Franconia (Grafton)	Culvert Mitigation	HMGP	Mitigation of annual road flooding by updating culvert to a pre-cast bridge.	Road experienced damage from spring flooding and washout beginning in the 1980s. In 2011 an ice jam caused flooding of road. Hurricane Irene's heavy rainfall caused washout of the road. July 2017, road washed out as a result of heavy rain, DR-4329.	Mitigation of the roadway's infrastructure has been identified as a LHMP mitigation action for the past two LHMPs.

Potential Future Development					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Goffstown (Hillsborough)	Culvert Mitigation	HMGP	Mitigation of undersized culvert on a locally used through way between Manchester and Dunbarton to be capable of withstanding up to 100-year storms.	Road's culverts washed out in May 2006 flooding, DR-1643.	N/A
Grafton (Grafton)	Culvert Mitigation	HMGP	Continue mitigation of culverts on road that serves as a secondary evacuation route. Bridge on road was identified by LHMP as an Emergency Response Facility infrastructure.	Heavy rain from Tropical Storm Irene caused washout and minor damage. Heavy rain in October 2017 caused washout and damage of roadway, DR 4355.	Repairing and mitigating the roadway's various infrastructures was identified as a LHMP Mitigation action for the past 2 LHMPs. Five separate actions addressed various infrastructure on this particular road.
Groton (Grafton)	Culvert Mitigation	HMGP	Mitigation of culverts on road that serves as a primary evacuation route. Bridge on road was identified by LHMP as an Emergency Response Facility infrastructure.	Roadway experienced washout and damage severe storms in 2008, DR 1782&1787. Roadway also experienced washout and damage during Tropical Storm Irene, DR 4026.	Repairing and mitigating the roadway's various infrastructures was identified as a LHMP Mitigation action for the past 3 LHMPs.

Potential Future Development					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Hampton Falls (Rockingham)	Culvert Mitigation	HMGP	Mitigation of culverts on road that houses town offices, and town's emergency services.	N/A	N/A
Kingston (Rockingham)	Bridge Mitigation	HMGP	Mitigation of bridge on primary main road in town. This road houses most of the town's Facilities, schools, and emergency services.	Road experienced flooding during heavy rain in May 2006, DR- 1643	Mitigation of infrastructure on road has been identified as a LHMP Mitigation action for the past two LHMPs with multiple action items.
Laconia (Belknap)	Culvert Mitigation	HMGP	Mitigation of culverts on road that serves as the only access to approximately 30 lakeside residents.	Road experience damage and flooding multiple times a year.	Mitigation of road's infrastructure has been identified as a LHMP Mitigation action for the last 3 LHMPs.
Merrimack (Hillsborough)	Bridge Mitigation	HMGP	Mitigation of infrastructure along river and brook through town. This body of water is one of the primary floodplains located in the community. Multiple critical facilities are located along this body of water throughout the town.	River experienced an ice jam and flooding in 1977.	N/A

Potential Future Development					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Nottingham (Rockingham)	Dam Mitigation	HHPD	Mitigation of aging infrastructure, potential dam failure, and flooding. Identified by LHMP as Critical infrastructure.	May 2006 caused dam breaching throughout the town, DR 1643.	N/A
Pittsfield (Merrimack)	Culvert Mitigation	HMGP	Mitigate culvert on primary roadway through town. Multiple Critical Infrastructures to the community are located on the road.	May 2006 caused flooding over roadway after nearby dam experienced spill over. Road has experienced flooding and washout after heavy rain events and rapid snow melts.	Road and nearby river are identified as risks for multiple hazards and problem statements in the LHMPs.
Portsmouth (Rockingham)	Slope Stabilization , Bridge Mitigation	LPDM	Mitigate infrastructure vulnerability of wastewater treatment facility by elevating the island to 3ft above 100-year flood plain level. LHMP identifies island as a Critical Facility.	N/A	Various infrastructures on the island are listed for mitigation actions.

Potential Future Development					
Location: Community (County)	Project Type	Funding Source	Purpose	Historical	Mitigation Plan
Rye (Rockingham)	Vulnerability Assessment (Project Scoping)	BRIC	Engineering for the mitigation of the community's sewer system.	The community has been impacted by almost yearly disaster declarations that include flooding.	Mitigation actions addressing the resiliency of the community's sewer infrastructure is extensively outlined within the LHMP.
Tuftonboro (Carroll)	Culvert Mitigation (x3)	HMGP	Mitigation of Infrastructure of culverts within town. Level of Protection for proposed culvert mitigations are within 1 year.	Community was impacted by inland flooding from heavy rain with storms in 2006, 2007 and 2008. Flooding occurred in connection with Tropical Storm Irene and Sandy. Flooding within the community have resulted in loss of life.	Mitigation of infrastructure on road has been identified as hazard risk areas on the LHMP, and as a LHMP Mitigation action for the past two LHMPs with multiple action items.
Wentworth (Grafton)	Culvert Mitigation	HMGP	Mitigation of culverts on road that serves as a secondary evacuation route. Road was identified by LHMP as an Emergency Response Facility infrastructure.	Mitigation of infrastructure on road has been identified as hazard risk areas on the LHMP, and as a LHMP Mitigation action for the past two LHMPs with multiple action items.	Mitigation of infrastructure on road has been identified as hazard risk areas on the LHMP, and as a LHMP Mitigation action for the past two LHMPs with multiple action items.

Potential Future Development

## Appendix J: Dam Location Maps

All Dam Location Maps in this section were retrieved from NH Water Sustainability Commission, retrieved May 2023. <https://www.nh.gov/water-sustainability/publications/index.htm>

**Legend**

- Active Dams
- Lakes/ Ponds
- Marsh, Wetlands
- Major Rivers And Streams

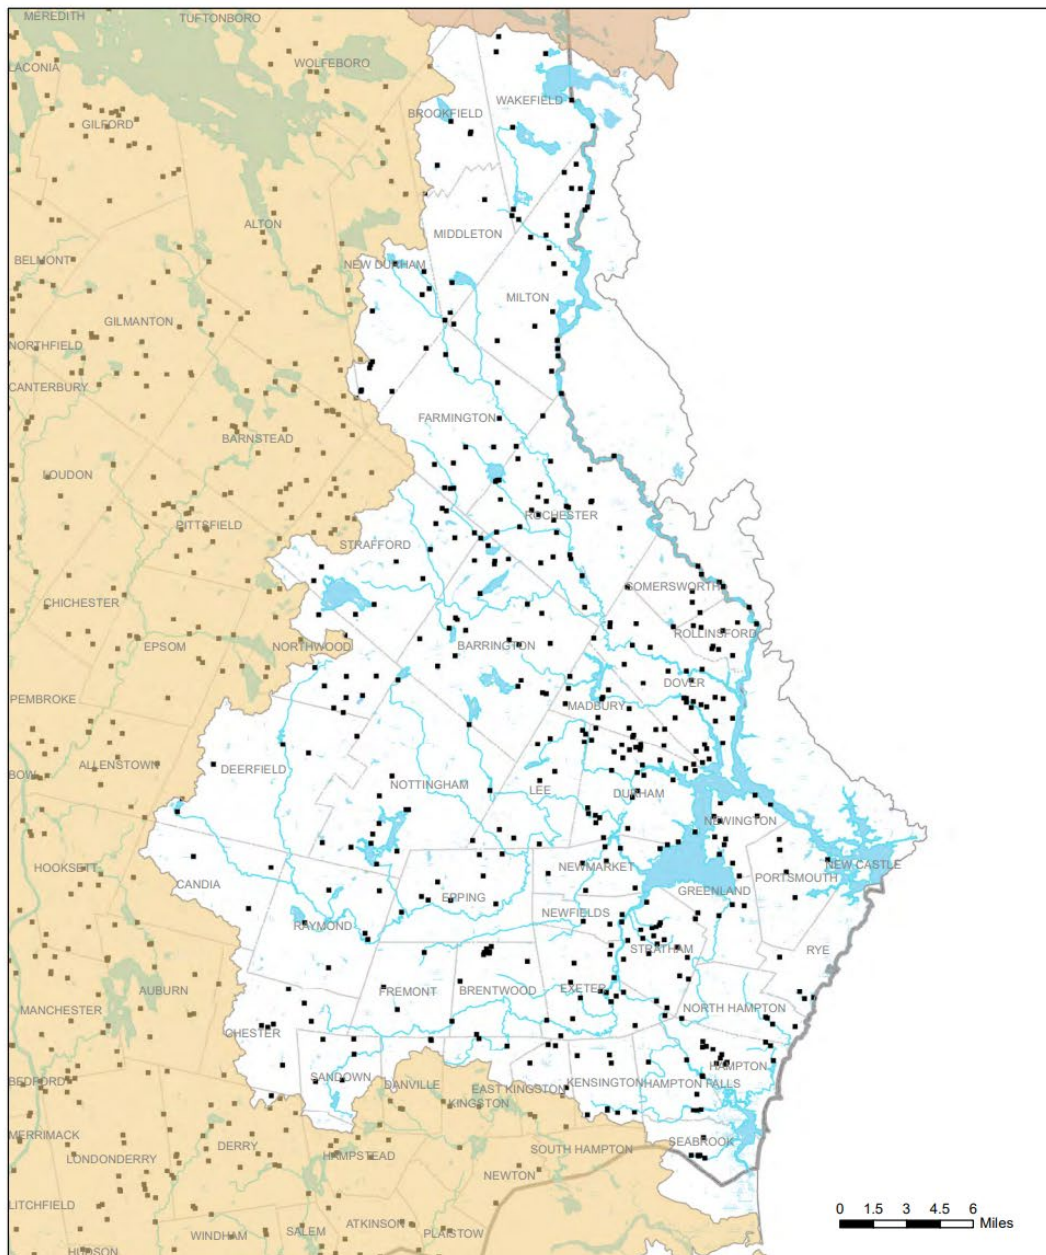

The coverages presented are under constant revision as new sites or facilities are added. They may not contain all of the potential or existing sites or facilities. NHOES is not responsible for the use or interpretation of this information. Not intended for legal purposes.
